Measures of Location and Spread

1. Sara is investigating the variation in daily maximum gust, t kn, for Camborne in June and July 1987.

She used the large data set to select a sample of size 20 from the June and July data for 1987. Sara selected the first value using a random number from 1 to 4 and then selected every third value after that.

(a) State the sampling technique Sara used.

(1)

(b) From your knowledge of the large data set, explain why this process may not generate a sample of size 20.

(1)

The data Sara collected are summarised as follows

$$n = 20 \quad \sum t = 374 \quad \sum t^2 = 7600$$

(c) Calculate the standard deviation.

(2)

Question	Scheme	Marks	AOs
1 (a)	Systematic (sample)	B1cao	1.2
(b)	In LDS some days have gaps because the data was not recorded	B1	2.4
(c)	$\bar{t} = \frac{374}{20} = 18.7$ $\sigma_t = \sqrt{\frac{7600}{20} - \bar{t}^2} \quad [= \sqrt{30.31}]$	M1	1.1a
	$= 5.5054\dots \text{ awrt } \underline{\underline{5.51}}$ (Accept use of $s_t = \sqrt{\frac{7600 - 20\bar{t}^2}{19}} = 5.6484\dots$)	A1	1.1b
(4 marks)			
Part	Notes		
(b)	B1 a correct explanation		
(c)	M1 for a correct expression for \bar{t} and σ_t or s_t . Ft an incorrect evaluation of \bar{t}		
	A1 for $\sigma_t = \text{awrt } 5.51$ or $s_t = \text{awrt } 5.65$		

4. Sara was studying the relationship between rainfall, r mm, and humidity, h %, in the UK. She takes a random sample of 11 days from May 1987 for Leuchars from the large data set.

She obtained the following results.

h	93	86	95	97	86	94	97	97	87	97	86
r	1.1	0.3	3.7	20.6	0	0	2.4	1.1	0.1	0.9	0.1

Sara examined the rainfall figures and found

$$Q_1 = 0.1 \quad Q_2 = 0.9 \quad Q_3 = 2.4$$

A value that is more than 1.5 times the interquartile range (IQR) above Q_3 is called an outlier.

- (a) Show that $r = 20.6$ is an outlier. (1)

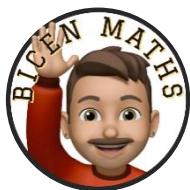

- (b) Give a reason why Sara might (i) include
(ii) exclude

this day's reading. (2)

4(a)	IQR = 2.3 and $20.6 \gg 2.4 + 1.5 \times 2.3$ (= 5.85) (Compare correct values)	B1	1.1b
		(1)	
(b)(i)	e.g. it is a piece of data and we should consider all the data (o.e.)	B1	2.4
	e.g. it is an extreme value and could unduly influence the analysis <u>or</u> it could be a mistake	B1	2.4
		(2)	

(a)	B1 for sight of the correct calculation and suitable comparison with 20.6
(b)(i)	B1 for a suitable reason for including the data point
(ii)	B1 for a suitable reason for excluding the data point

4. Helen is studying the daily mean wind speed for Camborne using the large data set from 1987. The data for one month are summarised in Table 1 below.

Windspeed	n/a	6	7	8	9	11	12	13	14	16
Frequency	13	2	3	2	2	3	1	2	1	2

Table 1

- (a) Calculate the mean for these data. (1)
- (b) Calculate the standard deviation for these data and state the units. (2)

The means and standard deviations of the daily mean wind speed for the other months from the large data set for Camborne in 1987 are given in Table 2 below. The data are not in month order.

Month	A	B	C	D	E
Mean	7.58	8.26	8.57	8.57	11.57
Standard Deviation	2.93	3.89	3.46	3.87	4.64

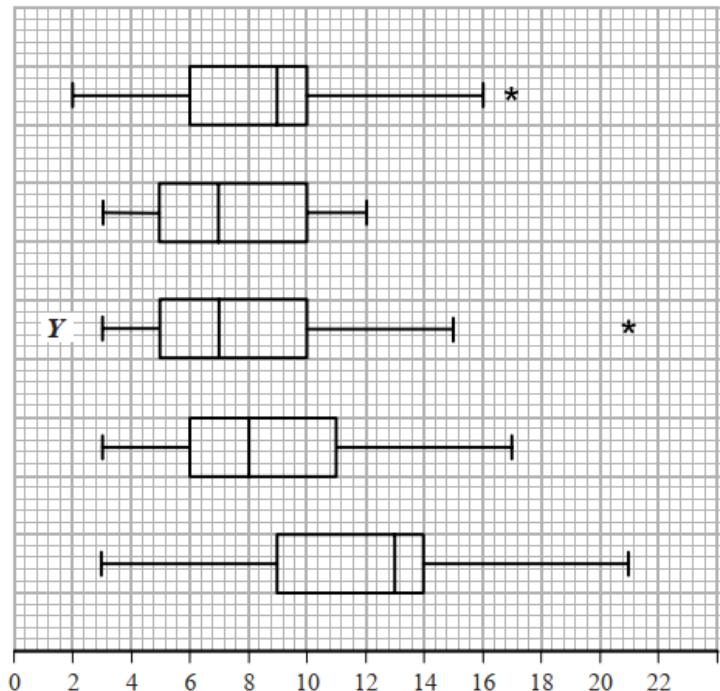

Table 2

- (c) Using your knowledge of the large data set, suggest, giving a reason, which month had a mean of 11.57 (2)

The data for these months are summarised in the box plots on the opposite page. They are not in month order or the same order as in Table 2.

- (d) (i) State the meaning of the * symbol on some of the box plots.
(ii) Suggest, giving your reasons, which of the months in Table 2 is most likely to be summarised in the box plot marked Y.

(3)

Qu	Scheme	Marks	AO
4 (a)	$\bar{x} = 10.2$ (2222...) awrt <u>10.2</u>	B1 (1)	1.1b
(b)	$\sigma_x = 3.17$ (20227...) Sight of "knots" or "kn" (condone knots/s etc)	B1ft B1 (2)	1.1b 1.2
(c)	October since it is windier in the autumn or month of the hurricane or latest month in the year	B1 B1 (2)	2.2b 2.4
(d)(i)	They represent <u>outliers</u>	B1	1.2
(ii)	Y has low median so expect lowish mean (but outlier so > 7) <u>and</u> Y has big range/IQR or spread so expect larger st.dev Suggests B	M1 A1 (3)	2.4 2.2b
			(8 marks)

Notes			
NB	$\bar{x} = \frac{184}{18}$ and $\sigma_x = \sqrt{\frac{2062}{18} - \bar{x}^2}$		
(a)	B1 for $\bar{x} = 10.2$ (allow exact fraction)	[This is an LDS mark]	
(b)	1 st B1ft allow 3.2 from a correct expr' accept $s = 3.26(3984\dots)$ [ft use of n/a] <u>Treating n/a as 0</u> May see $n = 31$ or $\bar{x} = 5.9354\dots$ which is B0 in (a) but here in (b) it gives $\sigma_x = 5.59(34\dots)$ or $s = 5.6858\dots$ (awrt 5.69) and scores 1 st B1 2 nd B1 accept kn accept in (a) or (b) (allow nautical miles/hour)	[This is an LDS mark]	
(c)	1 st B1 choosing October but accept September. 2 nd B1 for stating that (Camborne) is windier in autumn/winter months "because it is winter/autumn/windier/colder in "month" " Sep \leqslant "month" \leqslant Mar scores B1B1 for "month" = Sep or Oct and B0B1 for other months in range	[This is an LDS mark]	
(d)(i)	B1 for outlier or the idea of an extreme value allow "anomaly"		
	(ii)	M1 for a comment relating to location that mentions both median and mean <u>and</u> a comment relating to <u>spread</u> that mentions both range/IQR and standard deviation and leads to choosing B, C or D Choosing A or E is M0 Incorrect/false statements score M0 e.g. $Q_3 = (\text{mean} + \sigma)$ or identify $Q_2 = \text{mean}$ or Y has small spread	
ALT	Use of outliers: outlier is $(\text{mean} + 3\sigma)$ ($B = 19.9$), ($C = 18.95$), ($D = 20.2$) Must <u>see</u> at least one of these values and compare to Y 's outlier[leads to D or B] A1 for suitable inference i.e. B (accept D or B or D) M1 must be scored		

4. Joshua is investigating the daily total rainfall in Hurn for May to October 2015

Using the information from the large data set, Joshua wishes to calculate the mean of the daily total rainfall in Hurn for May to October 2015

- (a) Using your knowledge of the large data set, explain why Joshua needs to clean the data before calculating the mean.

(1)

Using the information from the large data set, he produces the grouped frequency table below.

- (b) Use linear interpolation to calculate an estimate for the upper quartile of the daily total rainfall.

(2)

- (c) Calculate an estimate for the standard deviation of the daily total rainfall in Hurn for May to October 2015

(2)

- (d) (i) State the assumption involved with using class midpoints to calculate an estimate of a mean from a grouped frequency table.

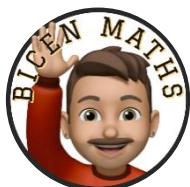

- (ii) Using your knowledge of the large data set, explain why this assumption does not hold in this case.

- (iii) State, giving a reason, whether you would expect the actual mean daily total rainfall in Hurn for May to October 2015 to be larger than, smaller than or the same as an estimate based on the grouped frequency table.

(3)

Daily total rainfall (r mm)	Frequency	Midpoint (x mm)
$0 \leq r < 0.5$	121	0.25
$0.5 \leq r < 1.0$	10	0.75
$1.0 \leq r < 5.0$	24	3.0
$5.0 \leq r < 10.0$	12	7.5
$10.0 \leq r < 30.0$	17	20.0

You may use $\sum fx = 539.75$ and $\sum fx^2 = 7704.1875$

Part	Working or answer an examiner might expect to see	Mark	Notes
(a)	Trace data needs to be converted to numbers before the calculation can be carried out	B1	This mark is given for a valid explanation
(b)	$(1+) \frac{138 - 131}{24} \times 4$	M1	This mark is given for a methods to find an estimate of the upper quartile
	= 2.17	A1	This mark is given for a correct estimate of the upper quartile
(c)	$\sigma = \sqrt{\frac{7704.1875}{184} - \left(\frac{539.75}{184}\right)^2}$	M1	This mark is given for using the formula for standard deviation to find an estimate for the standard deviation of the total daily rainfall
	= 5.77	A1	This mark is given for a correct estimate for the standard deviation of the total daily rainfall
(d)(i)	Using class midpoints to estimate the mean assumes that the values are uniformly distributed in each class	B1	This mark is given for an explanation that the data is assumed to be spread evenly across each class
(d)(ii)	The assumption does not hold since the majority of the data in the first class are 0	B1	This mark is given for a valid explanation by the assumption does not hold
(d)(iii)	The actual mean is likely to be smaller than the estimate; the first group has more values at 0 and close to 0	B1	This mark is given for a correct inference based on knowledge of the Large Data Set

2. Jerry is studying visibility for Camborne using the large data set June 1987.

The table below contains two extracts from the large data set.

It shows the daily maximum relative humidity and the daily mean visibility.

Date	Daily Maximum Relative Humidity	Daily Mean Visibility
Units	%	
10/06/1987	90	5300
28/06/1987	100	0

(The units for Daily Mean Visibility are deliberately omitted.)

Given that daily mean visibility is given to the nearest 100,

- (a) write down the range of distances in metres that corresponds to the recorded value 0 for the daily mean visibility.

(1)

Jerry drew the following scatter diagram, Figure 2, and calculated some statistics using the June 1987 data for Camborne from the large data set.

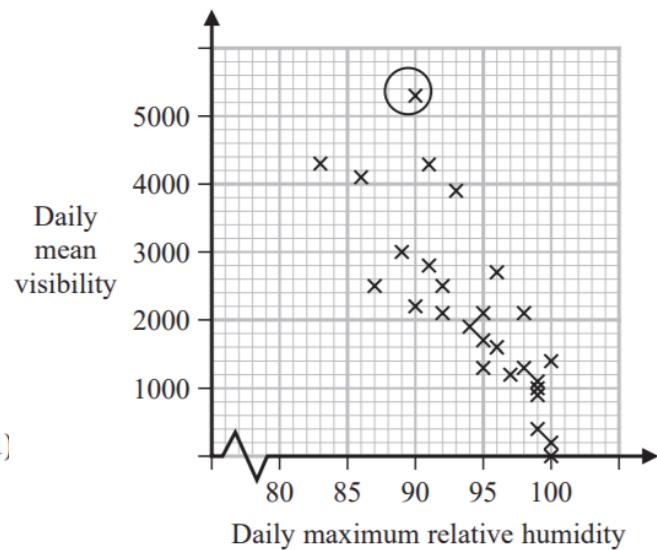

Figure 2

Jerry defines an outlier as a value that is more than 1.5 times the interquartile range above Q_3 or more than 1.5 times the interquartile range below Q_1 .

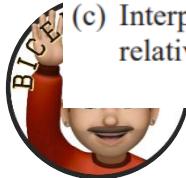

- (b) Show that the point circled on the scatter diagram is an outlier for visibility.

(2)

- (c) Interpret the correlation between the daily mean visibility and the daily maximum relative humidity.

(1)

	Q_1	IQR
Daily mean visibility	1100	1600
Daily maximum relative humidity (%)	92	8

Jerry drew the following scatter diagram, Figure 3, using the June 1987 data for Camborne from the large data set, but forgot to label the x -axis.

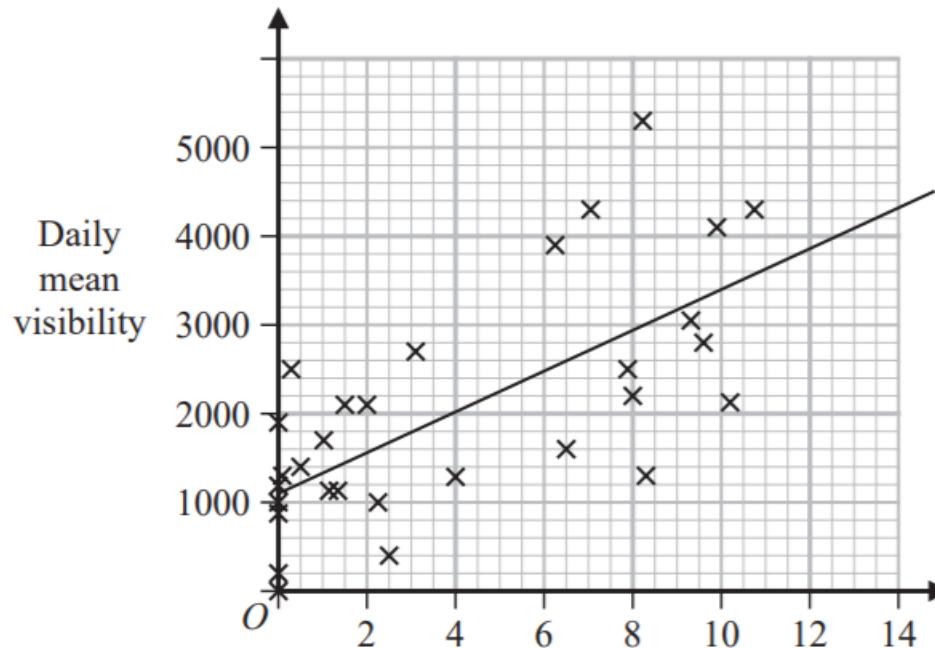

Figure 3

- (d) Using your knowledge of the large data set, suggest which variable the x -axis on this scatter diagram represents.

(1)

Question	Scheme	Marks	AOs
2(a)	0 to 500 m	B1 (1)	1.2
(b)	$1100 + 1600 + 1.5 \times 1600 [= 5100]$ $5300 > 5100$ therefore outlier	M1 A1 (2)	2.1 1.1b
(c)	As the humidity increases the mean visibility decreases	B1 (1)	2.4
(d)	(Hours of) sunshine	B1 (1)	2.2b

(5 marks)

Notes

(a)	B1:	For realising it is the maximum distance and distance given with correct units. Allow 0 to 50dm or < 500m or < 50dm
(b)	M1:	Attempt to find Q_3 and the upper limit A1: 5100, if a value for the point is stated it must be above 5100 otherwise it is A0. For a statement comparing and conclusion it is an outlier or it is above $Q_3 + 1.5\text{IQR}$. Allow accept the point circled is greater than 5100 oe
(c)	B1:	For a suitable interpretation of a negative correlation mentioning humidity and visibility
(d)	B1:	A correct deduction that the unlabelled variable is the hours of sunshine. Condone missing hours. Do not allow if more than one variable given. Must be quantitative variable Not cloud cover since values bigger than 8 Not wind speed since values not integers Not daily mean temperature since mean temperature near to zero are unlikely in June

4. A lake contains three different types of carp.

There are an estimated 450 mirror carp, 300 leather carp and 850 common carp.

Tim wishes to investigate the health of the fish in the lake.

He decides to take a sample of 160 fish.

- (a) Give a reason why stratified random sampling cannot be used.

- (b) Explain how a sample of size 160 could be taken to ensure that the estimated populations of each type of carp are fairly represented.

You should state the name of the sampling method used.

As part of the health check, Tim weighed the fish.

- (c) Calculate an estimate for the standard deviation of the weight of the carp.

Tim realised that he had transposed the figures for 2 of the weights of the fish.

He had recorded in the table 2.3 instead of 3.2 and 4.6 instead of 6.4

- (d) Without calculating a new estimate for the standard deviation, state what effect

(i) using the correct figure of 3.2 instead of 2.3

(ii) using the correct figure of 6.4 instead of 4.6

would have on your estimated standard deviation.

Give a reason for each of your answers.

His results are given in the table below.

	Weight (w kg)	Frequency (f)	Midpoint (m kg)
(1)	$2 \leq w < 3.5$	8	2.75
	$3.5 \leq w < 4$	32	3.75
(2)	$4 \leq w < 4.5$	64	4.25
	$4.5 \leq w < 5$	40	4.75
	$5 \leq w < 6$	16	5.5

(You may use $\sum fm = 692$ and $\sum fm^2 = 3053$)

(2)

Question	Scheme	Marks	AOs
4(a)	It is not possible to have a sampling frame (1)	B1 (1)	2.3
(b)	Quota sampling and (catch 85 common carp, 45 mirror carp and 30 leather carp) or (ignore any fish caught of a type where the quota is full) Quota sampling and catch 85 common carp, 45 mirror carp and 30 leather carp and ignore any fish caught of a type where the quota is full (2)	M1 A1 (2)	1.1a 1.1b
(c)	$\sigma = \sqrt{\frac{3053}{160} - \left(\frac{692}{160}\right)^2}$ $= 0.6129\dots$ awrt 0.613 (2)	M1 A1 (2)	1.1b 1.1b
(d)(i)	This would have no effect as the piece of data would remain in the same class	B1	2.2a
(ii)	This would increase the standard deviation as change in mean is small and $6.4 - 4.6 \approx 3\sigma$ therefore estimate of standard deviation will increase (2)	B1 (2)	2.2a
(7 marks)			

Notes

(a)	B1:	For the idea there cannot be a sampling frame/list
(b)	M1:	Quota sampling and either for the correct numbers of each type or for the idea that if quota full ignore the fish.
	A1:	Quota sampling and both the correct numbers of each type and for the idea that if quota full ignore the fish or sample until all quotas are full
(c)	M1:	A correct expression for σ
	A1:	Awrt 0.613 allow $s = \text{awrt } 0.615$
(d)	B1:	Correct deduction with suitable explanation Allow range for class. Do not allow there is no differences
	B1:	Correct deduction with suitable explanation. so would increase the standard deviation and a suitable reason. Allow the value is bigger than any others in the table or

2. The partially completed table and partially completed histogram give information about the ages of passengers on an airline.

There were no passengers aged 90 or over.

Age (x years)	$0 \leq x < 5$	$5 \leq x < 20$	$20 \leq x < 40$	$40 \leq x < 65$	$65 \leq x < 80$	$80 \leq x < 90$
Frequency	5	45	90			1

- (a) Complete the histogram. *(on the next slide)* (3)
- (b) Use linear interpolation to estimate the median age. (4)

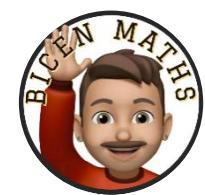

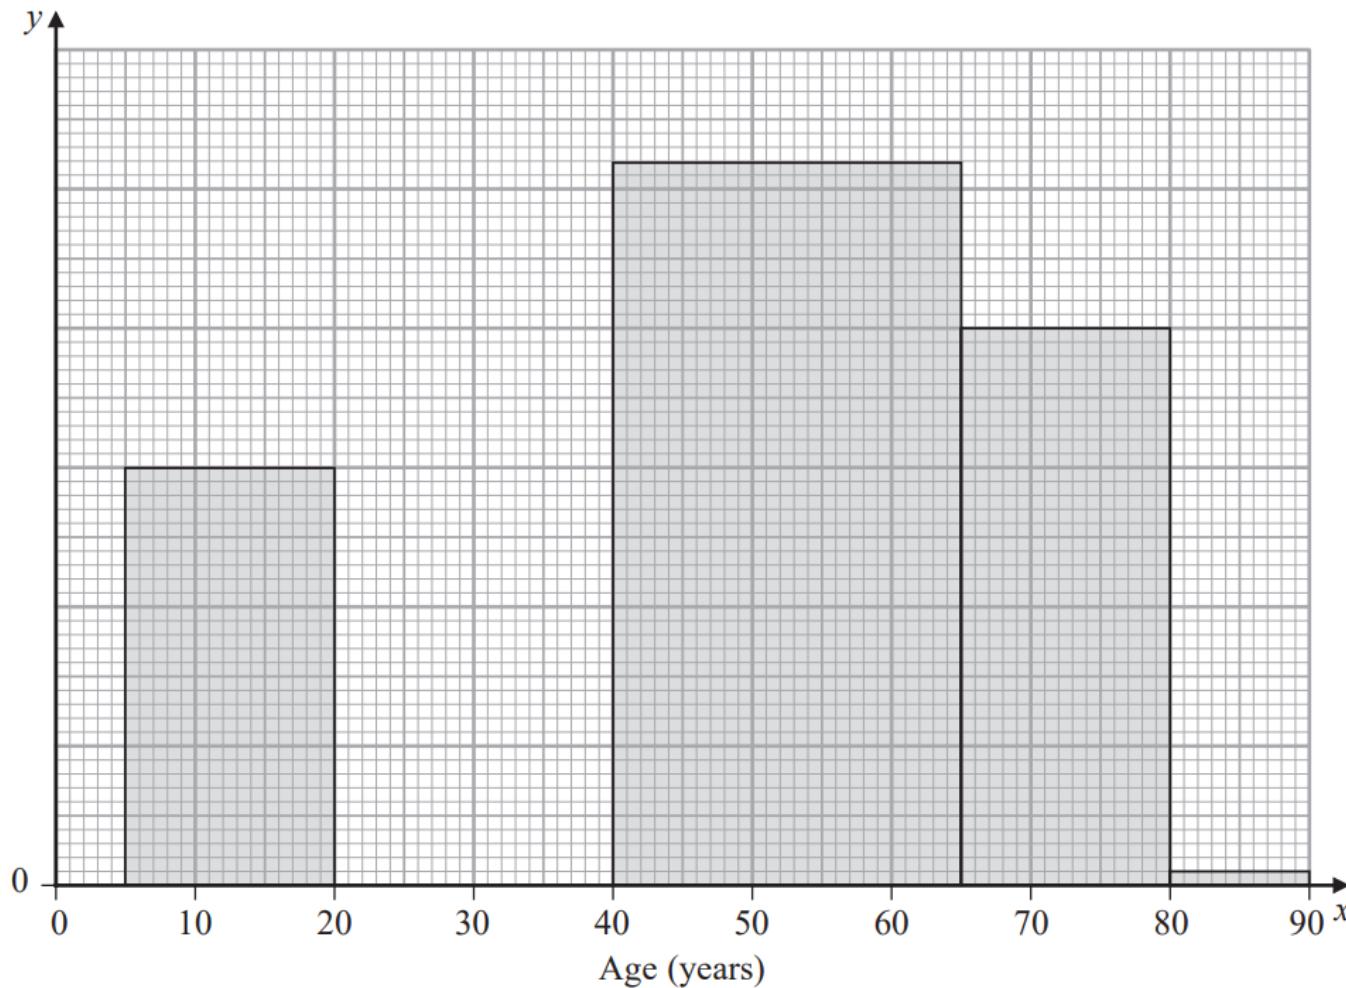

An outlier is defined as a value greater than $Q_3 + 1.5 \times \text{interquartile range}$.

Given that $Q_1 = 27.3$ and $Q_3 = 58.9$

- (c) determine, giving a reason, whether or not the oldest passenger could be considered as an outlier. (2)

Frequency density

Qu	Scheme	Marks	AO
2. (a)	From [5,20) $fd = 3$ <u>or</u> 1 large square = 2.5 passengers o.e. Correct bar above [0, 5) Correct bar above [20, 40)	M1 A1 A1	2.2a 1.1b 1.1b
(b)	For [40, 65) <u>130</u> passengers <u>or</u> for [65, 80) <u>60</u> passengers For attempt to find total number of passengers = <u>331</u> [Median =] $40 + \frac{\frac{1}{2}("331") - 140}{"130"} \times 25$ <u>or</u> $65 - \frac{270 - \frac{1}{2}("331")}{"130"} \times 25$ (o.e.) $= 44.9038\dots$ = awrt <u>44.9</u>	M1 A1ft M1 A1	2.1 1.1b 1.1b 1.1b
(c)	Upper outlier limit = $58.9 + 1.5 \times (58.9 - 27.3) = 106$ (.3) > 90 So oldest passenger is <u>not</u> an outlier	M1 A1	2.4 2.2a
		(2) (9 marks)	
	Notes		
(a)	M1 for attempt at fd or a suitable method to deduce the scale for the histogram May be implied by one correct bar. 1 st A1 for first bar [0, 5) with $fd = 1$ <u>or</u> 2 large squares high 2 nd A1 for third bar with $fd = 4.5$ <u>or</u> 9 large squares high		
(b)	1 st M1 for an attempt using their fd to find the missing frequencies. May be in table 1 st A1ft for a clear attempt to find the total number of passengers (ft their 130 and 60) 2 nd M1 for any expression/equation leading to correct Q_2 Must be using 40-65 class 2 nd A1 for awrt 44.9 (allow $(n + 1)$ leading to 45)		
(c)	M1 for finding the upper outlier limit (expression or awrt 106) <u>and</u> stating or implying > 90 A1 dep on M1 seen for deducing NOT an outlier		

3. Helen is studying one of the qualitative variables from the large data set for Heathrow from 2015.

She started with the data from 3rd May and then took every 10th reading.

There were only 3 different outcomes with the following frequencies

Outcome	A	B	C
Frequency	16	2	1

- (a) State the sampling technique Helen used. (1)
- (b) From your knowledge of the large data set
- (i) suggest which variable was being studied,
 - (ii) state the name of outcome A. (2)

George is also studying the same variable from the large data set for Heathrow from 2015. He started with the data from 5th May and then took every 10th reading and obtained the following

Outcome	A	B	C
Frequency	16	1	1

Helen and George decided they should examine all of the data for this variable for Heathrow from 2015 and obtained the following

Outcome	A	B	C
Frequency	155	26	3

- (c) State what inference Helen and George could reliably make from their original samples about the outcomes of this variable at Heathrow, for the period covered by the large data set in 2015. (1)

Qu	Scheme	Marks	AO
3. (a)	Systematic (sampling)	B1	1.2
(b)(i)	[Daily Mean] Wind Speed	B1	(1) 2.2a
(ii)	Light	B1	1.2
(c)	Variable <i>A</i> occurs most (around 80~90%) of the time	B1 (2) (1) (4 marks)	2.2b
Notes			
(a)	B1 for identifying the correct sampling technique Allow slight misspelling e.g. “sysmatic”, “sytmatic” Do NOT allow “systemic”		
(b)(i)	B1 for identifying appropriate qualitative variable.	{LDS mark}	
(ii)	Allow “Wind speed” or “Wind strength” but NOT just “wind” or “wind direction” B1 for realising that modal wind speed is “Light”	{LDS mark}	
NB	Allow just “light” or “most light” These two B marks are independent so can score B0B1 for e.g. “rainfall” and “light”		
(c)	B1 for inferring that frequency of <i>A</i> can be estimated fairly reliably: {underestimates <i>B</i> and over estimates <i>C</i> } e.g. “ <i>A</i> is the most frequent” [can then ignore comments about <i>B</i> and <i>C</i>]		

1. The number of hours of sunshine each day, y , for the month of July at Heathrow are summarised in the table below.

Hours	$0 \leq y < 5$	$5 \leq y < 8$	$8 \leq y < 11$	$11 \leq y < 12$	$12 \leq y < 14$
Frequency	12	6	8	3	2

A histogram was drawn to represent these data. The $8 \leq y < 11$ group was represented by a bar of width 1.5 cm and height 8 cm.

- (a) Find the width and the height of the $0 \leq y < 5$ group.

(3)

- (b) Use your calculator to estimate the mean and the standard deviation of the number of hours of sunshine each day, for the month of July at Heathrow.
Give your answers to 3 significant figures.

(3)

The mean and standard deviation for the number of hours of daily sunshine for the same month in Hurn are 5.98 hours and 4.12 hours respectively.

Thomas believes that the further south you are the more consistent should be the number of hours of daily sunshine.

- (c) State, giving a reason, whether or not the calculations in part (b) support Thomas' belief.

(2)

- (d) Estimate the number of days in July at Heathrow where the number of hours of sunshine is more than 1 standard deviation above the mean.

(2)

A2 SAMs

Location and Spread

	A1: for height = 7.2 (cm)
(b)	M1: for a correct expression for σ or s , can ft their value for mean
	A1: awrt 3.69 (allow $s = 3.75$)
(c)	M1: for a suitable comparison of standard deviations to comment on reliability.
	A1: for stating Hurn is south of Heathrow and a correct conclusion
(d)	M1: for a correct expression – ft their $\bar{x} + \sigma \approx 10.3$
	A1: for 7 days but accept 6 (rounding down) following a correct expression

3. Stav is studying the large data set for September 2015

He codes the variable Daily Mean Pressure, x , using the formula $y = x - 1010$

The data for all 30 days from Hurn are summarised by

$$\sum y = 214 \quad \sum y^2 = 5912$$

- (a) State the units of the variable x (1)
- (b) Find the mean Daily Mean Pressure for these 30 days. (2)
- (c) Find the standard deviation of Daily Mean Pressure for these 30 days. (3)

Stav knows that, in the UK, winds circulate

- in a **clockwise** direction around a region of **high** pressure
- in an **anticlockwise** direction around a region of **low** pressure

The table gives the Daily Mean Pressure for 3 locations from the large data set on 26/09/2015

Location	Heathrow	Hurn	Leuchars
Daily Mean Pressure	1029	1028	1028
Cardinal Wind Direction			

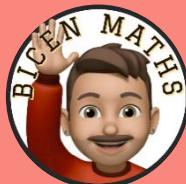

The Cardinal Wind Directions for these 3 locations on 26/09/2015 were, in random order,

W NE E

You may assume that these 3 locations were under a single region of pressure.

- (d) Using your knowledge of the large data set, place each of these Cardinal Wind Directions in the correct location in the table.
Give a reason for your answer.

(2)

(d)	High pressure (since approx. mean + sd) so clockwise Locations are (from North to South): Leuchars, Heathrow, Hurn Wind direction is direction wind blows <u>from</u> So: Heathrow (NE) Hurn (E) Leuchars (W)	B1 (2)	2.4 2.2a

Notes

FYI	$1 \text{ hPa} = 100 \text{ Pa}; 10\text{hPa} = 1 \text{ kPa}; 1\text{Pa} = 1 \text{ Nm}^{-2}$
(a)	B1 for "hectopascal" <u>or</u> hPa (condone pascals, allow millibars <u>or</u> mb) o.e. Do NOT allow kPa <u>or</u> kilopascals <u>or</u> Pa on its own
(b)	M1 for a strategy to find \bar{x} Allow an attempt to find $\sum x$ that gets as far as $\sum x = \sum y + 30 \times 1010 [= 30\ 514]$ A1 for awrt 1017 (accept 1020) [Ignore incorrect units]
(c)	1 st M1 for an overall strategy using the fact $\sigma_x = \sigma_y$ (can be implied by correct <u>final ans</u>) <u>or</u> for $\sum x = 30\ 514$ and $\sum x^2 = 31\ 041\ 192$ (both seen and correct) 2 nd M1 for a correct expression (with $\sqrt{ }$) (ft their \bar{y} to 3sf) allow awrt 146 for 146.1822.. <u>or</u> for correct expression in x can ft their $\sum x > 30\ 000$ or their answer to (b) A1 (dep on 2 nd M1) for awrt 12.1 [Ignore incorrect units] Final ans of awrt 12.1 scores 3/3 but if they then adjust for x e.g. add 1010 (M0M1A1)
(d)	1 st B1 for at least one of these reasons (these 2 lines) clearly stated (may see diagram) Need "high pressure" and "clockwise" to score on 1 st line Contradictory statements B0 e.g. correct N~S list but say "anticlockwise" 2 nd B1 (indep of 1 st B1) for deducing the 3 correct directions either in the table or stated as above If the answers in table and text are different we take the table (as question says)

3. Dian uses the large data set to investigate the Daily Total Rainfall, r mm, for Camborne.

(a) Write down how a value of $0 < r \leqslant 0.05$ is recorded in the large data set.

(1)

Dian uses the data for the 31 days of August 2015 for Camborne and calculates the following statistics

$$n = 31 \quad \sum r = 174.9 \quad \sum r^2 = 3523.283$$

(b) Use these statistics to calculate

- (i) the mean of the Daily Total Rainfall in Camborne for August 2015,
- (ii) the standard deviation of the Daily Total Rainfall in Camborne for August 2015.

(3)

Dian believes that the mean Daily Total Rainfall in August is less in the South of the UK than in the North of the UK.

The mean Daily Total Rainfall in Leuchars for August 2015 is 1.72 mm to 2 decimal places.

(c) State, giving a reason, whether this provides evidence to support Dian's belief.

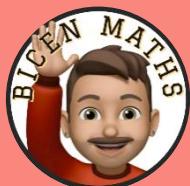

(2)

Dian uses the large data set to estimate the proportion of days with no rain in Camborne for 1987 to be 0.27 to 2 decimal places.

(d) Explain why the distribution $B(14, 0.27)$ might **not** be a reasonable model for the number of days without rain for a 14-day summer event.

(1)

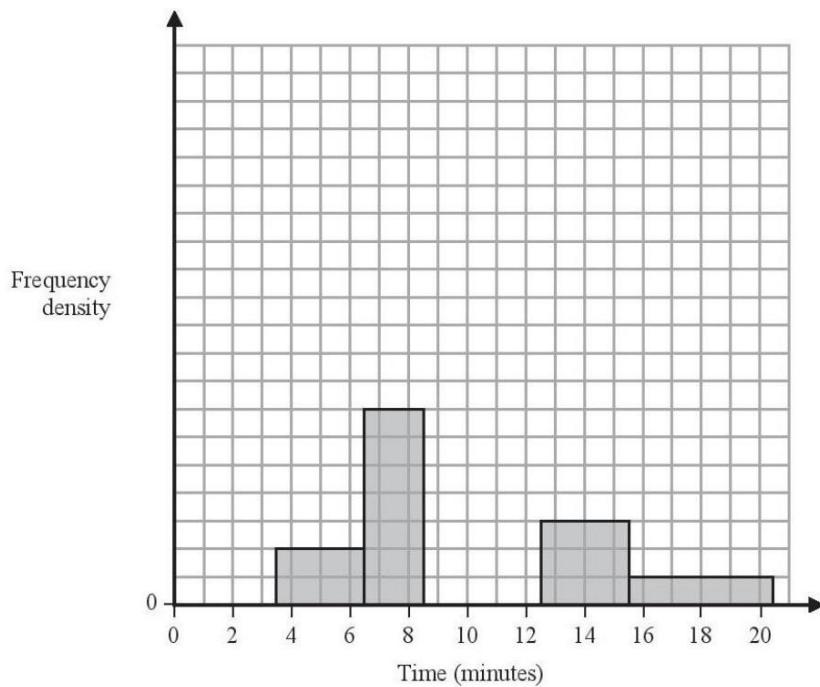

Question	Scheme	Marks	AOs

4. Jiang is studying the variable Daily Mean Pressure from the large data set.

He drew the following box and whisker plot for these data for one of the months for one location using a linear scale but

- he failed to label all the values on the scale
- he gave an incorrect value for the median

Using your knowledge of the large data set, suggest a suitable value for

- (a) the median, (1)

- (b) the range. (1)

(You are not expected to have memorised values from the large data set. The question is simply looking for sensible answers.)

4. (a)	Accept 990 to 1030 inclusive	B1 (1)	1.1b
	(b) Any range between 10 and 50 inclusive	B1 (1)	1.1b
(2 marks)			
Notes			
(a)	B1 (Median pressures usually around 1000~1020)	[LDS mark]	
(b)	B1 Any answer in this range Allow answers in the form $a \sim b$ where $ b - a $ is between 10 and 50 Also allow the case where <u>both</u> a and b are in $[10, 50]$	[LDS mark]	

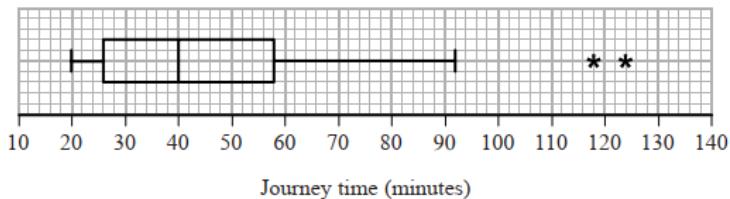

4. Charlie is studying the time it takes members of his company to travel to the office. He stands by the door to the office from 0840 to 0850 one morning and asks workers, as they arrive, how long their journey was.

- (a) State the sampling method Charlie used. (1)
- (b) State and briefly describe an alternative method of non-random sampling Charlie could have used to obtain a sample of 40 workers. (2)

Taruni decided to ask every member of the company the time, x minutes, it takes them to travel to the office.

- (c) State the data selection process Taruni used. (1)

Taruni's results are summarised by the box plot and summary statistics below.

$$n = 95 \quad \sum x = 4133 \quad \sum x^2 = 202294$$

- (d) Write down the interquartile range for these data. (1)

- (e) Calculate the mean and the standard deviation for these data. (3)

- (f) State, giving a reason, whether you would recommend using the mean and standard deviation or the median and interquartile range to describe these data. (2)

Rana and David both work for the company and have both moved house since Taruni collected her data.

Rana's journey to work has changed from 75 minutes to 35 minutes and David's journey to work has changed from 60 minutes to 33 minutes.

Taruni drew her box plot again and only had to change two values.

- (g) Explain which two values Taruni must have changed and whether each of these values has increased or decreased. (3)

		= 15.385... awrt <u>15.4</u> (min)	A1 (3) 1.1b
(f)	There are outliers in the data (or data is skew) which will affect mean and sd Therefore use median and IQR	B1 dB1 (2)	2.4 2.4
(g)	Value of 20, LQ at 26 and outliers will not change <u>or</u> state that median and upper quartile are the values that <u>do</u> change More values now below 40 than above so Q_1 <u>or</u> Q_3 will change and be lower Both Q_1 <u>and</u> Q_3 will be lower	B1 M1 A1 (3)	1.1b 2.1 2.4 (13 marks)

	Notes
(b)	1 st B1 for quota (sampling) mentioned ("Stratified" or "systematic" or "random" are B0B0) 2 nd B1 for a description of how such a system might work, requires suitable strata or categories e.g. time slots, departments, gender, age groups, distance travelled etc Suggestion of randomness is B0
(e)	B1 for a correct mean (awrt 43.5) M1 for a correct expression for the sd (including $\sqrt{ }$) ft their mean A1 for awrt 15.4 (Allow s = 15.4667... awrt 15.5)
(f)	1 st B1 for acknowledging <u>outliers</u> or <u>skewness</u> are a problem for <u>mean</u> and <u>sd</u> "extreme values"/"anomalies" OK. May be implied by saying median and IQR not affected by.. We need to see mention of "outliers", "skewness" and the problem so "data is skewed so use median and IQR" is B0 unless mention that they are not affected by extreme values <u>or</u> mean and standard deviation can be "inflated" by the positive skew etc 2 nd dB1 dep on 1 st B1 for therefore choosing <u>median and IQR</u>
(g)	B1 for identifying 2 of these 3 groups of unchanged values or stating only Q_1 and Q_3 change M1 for <u>explaining</u> that median or UQ should be lower. E.g. the 2 values have moved to below 40 (or 58) and therefore more than 50% below 40 or (more than 75% below 58) <u>or</u> an argument to show that the other 3 values are the same. (o.e.) Allow arrows on box plot provided statement in words about increased % below 40 or 58 etc A1 for stating median <u>and</u> UQ are both lower with clear evidence of M1 scored [If lots of values on 40 then median might not change but, since two values <u>do</u> change then UQ would change. If this meant that 92 became an outlier then we would have a new value for upper whisker and an extra outlier so effectively 3 values are altered. So median changes]

2.

**Figure 1**

The partially completed box plot in Figure 1 shows the distribution of daily mean air temperatures using the data from the large data set for Beijing in 2015

An outlier is defined as a value

- more than $1.5 \times \text{IQR}$ below Q_1 or
- more than $1.5 \times \text{IQR}$ above Q_3

The three lowest air temperatures in the data set are 7.6°C , 8.1°C and 9.1°C

The highest air temperature in the data set is 32.5°C

(a) Complete the box plot in Figure 1 showing clearly any outliers.

(4)

(b) Using your knowledge of the large data set, suggest from which month the two outliers are likely to have come.

(1)

Using the data from the large data set, Simon produced the following summary statistics for the daily mean air temperature, $x^\circ\text{C}$, for Beijing in 2015

$$n = 184 \quad \sum x = 4153.6 \quad S_{xx} = 4952.906$$

(c) Show that, to 3 significant figures, the standard deviation is 5.19°C

(1)

Simon decides to model the air temperatures with the random variable

$$T \sim N(22.6, 5.19^2)$$

(d) Using Simon's model, calculate the 10th to 90th interpercentile range.

(3)

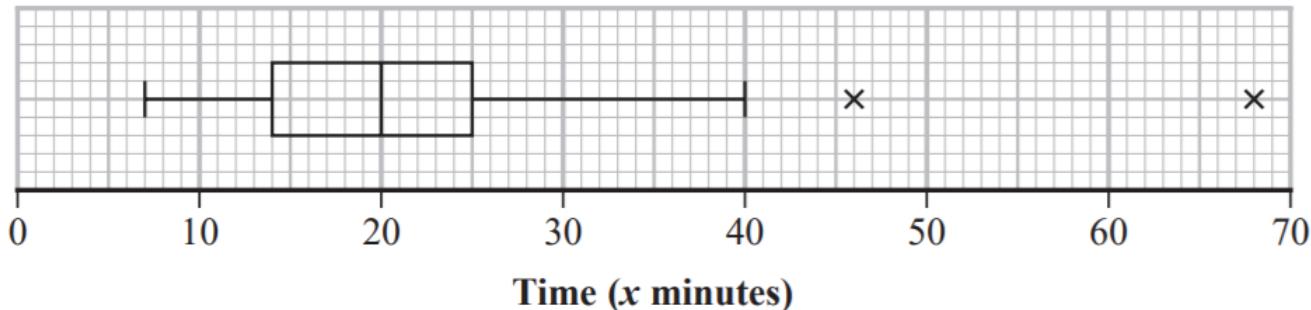

(a)	$IQR = 2.6 - 19.4 = 7.2$	B1	This mark is given for finding the interquartile range
	$19.4 - (1.5 \times 7.2) = 8.6$ $19.4 + (1.5 \times 7.2) = 37.4$	M1	This mark is given for a method find the values for the whiskers of the boxplot
		A1	This mark is given for plotting the correct whisker (8.6) on the boxplot
		A1	This mark is given for plotting the two correct outliers 7.6 °C and 8.1 °C
(b)	October (since it is the month with the coldest temperatures between May and October in Beijing)	B1	This mark is given for a correct suggestion with a supporting reason.
(c)	$\sigma = \sqrt{\frac{S_{xx}}{n}} = \sqrt{\frac{4952.906}{184}} = \sqrt{26.92} = 5.19$	B1	This mark is given for showing the calculation for the standard deviation to three significant figures
(d)	$z = (\pm) 1.2816$	B1	This mark is given for identifying the z-value for the 10th and 90th percentiles (from tables or calculator)
	$2 \times z \times 5.19$	M1	This mark is given for a method to find the interpercentile range between the 10th and 90th value
	$= 13.303$	A1	This mark is given for finding a correct interpercentile range between the 10th and 90th value

3. Each member of a group of 27 people was timed when completing a puzzle.

The time taken, x minutes, for each member of the group was recorded.

These times are summarised in the following box and whisker plot.

- (a) Find the range of the times.

(1)

- (b) Find the interquartile range of the times.

(1)

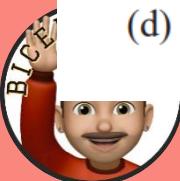

For these 27 people $\sum x = 607.5$ and $\sum x^2 = 17623.25$

- (c) calculate the mean time taken to complete the puzzle,

(1)

- (d) calculate the standard deviation of the times taken to complete the puzzle.

(2)

Taruni defines an outlier as a value more than 3 standard deviations above the mean.

- (e) State how many outliers Taruni would say there are in these data, giving a reason for your answer.

(1)

Adam and Beth also completed the puzzle in a minutes and b minutes respectively, where $a > b$.

When their times are included with the data of the other 27 people

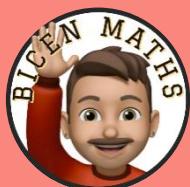

- the median time increases
- the mean time does not change

- (f) Suggest a possible value for a and a possible value for b , explaining how your values satisfy the above conditions.

(3)

- (g) Without carrying out any further calculations, explain why the standard deviation of all 29 times will be lower than your answer to part (d).

(1)

Qu 3	Scheme	Marks	AO
(a)	[$68 - 7 =]$ <u>61</u> (only)	B1 (1)	1.1b
(b)	[$25 - 14] = \underline{\mathbf{11}}$	B1 (1)	1.1b
(c)	$\left[\mu \text{ or } \bar{x} = \frac{607.5}{27} = \right] = \underline{\mathbf{22.5}}$	B1 (1)	1.1b
(d)	$\sigma = \sqrt{\frac{17623.25}{27} - "22.5"^2}$ or $\sqrt{146.4629\dots}$ $= 12.10218\dots$ awrt <u>12.1</u>	M1 A1 (2)	1.1b 1.1b
(e)	$\mu + 3\sigma = "22.5" + 3 \times "12.1\dots" =$ awrt 59 so only <u>one</u> outlier	B1ft (1)	1.1b
(f)	Median increases implies that both values must be > 20 Mean is the same means that $a + b = 45$ So possible values are: e.g. $b = 21$ and $a = 24$ (o.e.)	M1 M1 A1 (3)	3.1b 1.1b 2.2b
(g)	Both values will be less than 1 standard deviation from the mean and so the standard deviation of all 29 values will be smaller	B1 (1)	2.4
(10 marks)			

	Notes
(a)	B1 for correctly interpreting the box plot to find the range (more than 1 answer is B0)
(b)	B1 for correct understanding of IQR and answer of 11
(c)	B1 for 22.5 only (or exact equivalent such as $\frac{45}{2}$). Allow 22 mins and 30 secs.
(d)	M1 for a correct expression including square root. Allow $\sqrt{146}$ or better. Ft their mean A1 for awrt 12.1 NB Allow use of $s = 12.3327\dots$ or awrt 12.3
(e)	B1ft for a correct calculation or value based on their μ and σ and compatible conclusion
(f)	1 st M1 Correct start to the problem and a correct statement about the values based on median Allow if their final two values are both >20 2 nd M1 for a correct explanation leading to equation $a + b = 45$ (o.e. e.g. equidistant from mean) Allow if their final two values sum to 45 A1 for a correct pair of values (both > 20 with a sum of 45) and at least some attempt to explain how their values satisfy at least one of the conditions (both > 20 <u>or</u> $a + b = 45$). Ignore $a =$ or $b =$ labels The values for a and b do not need to be integers.
NB	
(g)	B1 for a correct explanation. Must mention that both values are less than 1 sd (ft their answer to (d)) from the mean

Correlation

Sara decided to exclude this day's reading and drew the following scatter diagram for the remaining 10 days' values of r and h .

(c) Give an interpretation of the correlation between rainfall and humidity.

(1)

The equation of the regression line of r on h for these 10 days is $r = -12.8 + 0.15h$

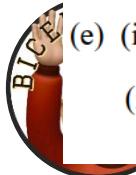

(d) Give an interpretation of the gradient of this regression line.

(1)

(e) (i) Comment on the suitability of Sara's sampling method for this study.

(2)

(ii) Suggest how Sara could make better use of the large data set for her study.

(c)	e.g. “as humidity increases rainfall increases”	B1	2.2b
		(1)	
(d)	e.g. a 10% increase in humidity gives rise to a 1.5 mm increase in rainfall or represents 0.15mm of rainfall per percentage of humidity	B1	3.4
		(1)	
(e)(i)	Not a good method since only uses 11 days from one location in one month.	B1	2.4
(ii)	e.g. She should use data from more of the UK locations and more of the months or using a spreadsheet or computer package she could use all of the available UK data	B1	2.4
		(2)	
		(7 marks)	

(c)	B1 for a suitable interpretation of positive correlation mentioning humidity and rainfall
(d)	B1 for a suitable description of the rate: rainfall per percentage of humidity including reference to values.
(e)(i)	B1 for a comment that supports the idea that her sampling method was not a good one
(ii)	B1 for some sensible suggestions that would give a better representation of the data across the UK. Must show some awareness of the fact that LDS has different locations and more months of data available but must be clear they are NOT using any overseas locations. NB B0 for a comment that says use more than one location without specifying that only UK locations are required.

1. A company is introducing a job evaluation scheme. Points (x) will be awarded to each job based on the qualifications and skills needed and the level of responsibility. Pay (£ y) will then be allocated to each job according to the number of points awarded.

Before the scheme is introduced, a random sample of 8 employees was taken and the linear regression equation of pay on points was $y = 4.5x - 47$

- (a) Describe the correlation between points and pay.

(1)

- (b) Give an interpretation of the gradient of this regression line.

(1)

- (c) Explain why this model might not be appropriate for all jobs in the company.

(1)

Qu	Scheme	Marks	AO
1 (a)	Positive (correlation)	B1 (1)	1.2
(b)	Every extra point gives £4.5(0) more on pay (o.e.)	B1 (1)	3.4
(c)	e.g. For points < 11 it would give pay < 0 which is ridiculous	B1 (1)	2.4
		(3 marks)	
	Notes		
(a)	B1 for “positive”. Allow an interpretation e.g. “as points increase pay increases” is B1 Read whole answer: contradictory comments such as “positive correlation, as points increase pay decreases” scores B0		
(b)	B1 for any correct comment conveying idea of <u>£s per point</u> and including a correct value; must have idea of <u>rate</u> . Can condone missing £ sign. Accept 4.5 e.g. “every 10 points earns an <u>extra</u> (or increase) of £45” is B1 BUT “every point earns £4.5(0)” is B0 <i>doesn't have idea of rate</i>		
(c)	B1 for a suitable comment mentioning “points” or “pay” (o.e. e.g. “amount”) <u>or</u> commenting on “small sample” or “range of points” used to find line <u>The following examples would score B1</u> Can say that <u>n points</u> (for $n < 10.4$) would give <u>negative pay</u> so not suitable Any comment suggesting that some jobs would end up with <u>negative pay</u> Don’t know the <u>range of points</u> used to find the <u>regression line</u> A <u>small sample of size 8</u> may not be <u>representative</u> to cover all jobs		
	B0 for a focus on “qualifications” or “hours” worked only <u>The following examples would score B0</u> Some jobs require no (or low) skills or qualifications (<i>need negative pay</i>)		

1. A sixth form college has 84 students in Year 12 and 56 students in Year 13

The head teacher selects a stratified sample of 40 students, stratified by year group.

- (a) Describe how this sample could be taken.

(3)

The head teacher is investigating the relationship between the amount of sleep, s hours, that each student had the night before they took an aptitude test and their performance in the test, p marks.

For the sample of 40 students, he finds the equation of the regression line of p on s to be

$$p = 26.1 + 5.60s$$

- (b) With reference to this equation, describe the effect that an extra 0.5 hours of sleep may have, on average, on a student's performance in the aptitude test.

(1)

- (c) Describe one limitation of this regression model.

(1)

Part	Working or answer an examiner might expect to see	Mark	Notes
(a)	Label Year 12s 1–84 and Year 13s 1–56	B1	This mark is given for a suitably labelled list for each year group
	Use random numbers to select a...	B1	This mark is given for the use of random numbers to select students
	...simple random sample of 24 Year 12s and 16 Year 13s	B1	This mark is given for 24 Year 12s and 16 Year 13s
(b)	$5.60 \times 0.5 = 2.8$ Increase by 2.8 marks	B1	This mark is given for the using the gradient of the regression equation
(c)	For example: The model suggests that the longer students sleep, the better they will perform in the test The best performance is predicted for the students who never wake up The model is only valid between 0 and 24 hours (the range of the data)	B1	This mark is given for a valid limitation of the model

- The relationship between two variables p and t is modelled by the regression line with equation

$$p = 22 - 1.1 t$$

The model is based on observations of the independent variable, t , between 1 and 10

- Describe the correlation between p and t implied by this model.

(1)

Given that p is measured in centimetres and t is measured in days,

- state the units of the gradient of the regression line.

(1)

Using the model,

- calculate the change in p over a 3-day period.

(2)

Tisam uses this model to estimate the value of p when $t = 19$

- Comment, giving a reason, on the reliability of this estimate.

(1)

Qu	Scheme	Marks	AO
1. (a)	Negative (since gradient of regression line is negative)	B1 (1)	1.2
(b)	cm/day (o.e. e.g. cm day ⁻¹)	B1 (1)	2.2a
(c)	$3 \times [\pm]1.1$ = decrease of 3.3 [cm]	M1 A1 (2)	3.4 1.1b
(d)	19 is (well) outside the range [1, 10] <u>or</u> involves extrapolation (o.e.) so (possibly) unreliable/ inaccurate (o.e.)	B1 (1) (5 marks)	2.4

Probability

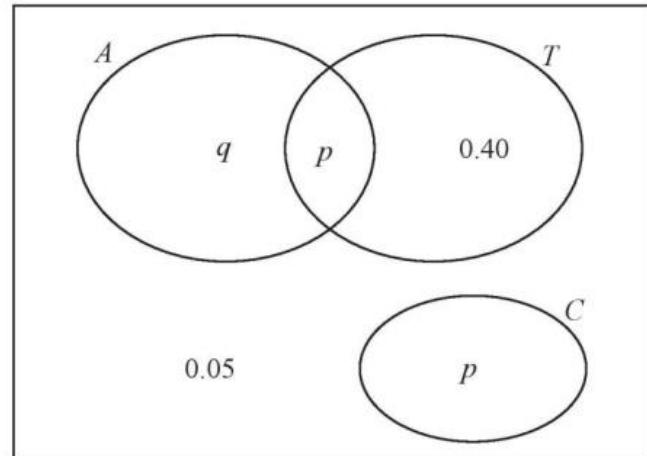

3. The Venn diagram shows the probabilities for students at a college taking part in various sports.

A represents the event that a student takes part in Athletics.

T represents the event that a student takes part in Tennis.

C represents the event that a student takes part in Cricket.

p and q are probabilities.

The probability that a student selected at random takes part in Athletics or Tennis is 0.75

- (a) Find the value of p .

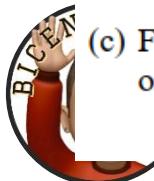

(1)

- (b) State, giving a reason, whether or not the events A and T are statistically independent.
Show your working clearly.

(3)

- (c) Find the probability that a student selected at random does not take part in Athletics or Cricket.

(1)

Question	Scheme	Marks	AOs
3 (a)	$p = [1 - 0.75 - 0.05] = \underline{0.20}$	B1	1.1b (1)
(b)	$q = \underline{0.15}$ $P(A) = 0.35 \quad P(T) = 0.6 \quad P(A \text{ and } T) = 0.20$ $P(A) \times P(T) = 0.21$ <p>Since $0.20 \neq 0.21$ therefore A and T are not independent</p>	B1ft M1 A1	1.1b 2.1 2.4 (3)

			(5 marks)

Part	Notes
(a)	B1cao for $p = 0.20$
(b)	B1ft for use of their p and $P(A \text{ or } T)$ to find q i.e. $0.75 - "p" - 0.40 \text{ or } q = 0.15$
	M1 for the statement of all probabilities required for a suitable test and sight of any appropriate calculations required.
(c)	A1 All probabilities correct, correct comparison and suitable comment. B1cao for 0.45

2. A factory buys 10% of its components from supplier A , 30% from supplier B and the rest from supplier C . It is known that 6% of the components it buys are faulty.

Of the components bought from supplier A , 9% are faulty and of the components bought from supplier B , 3% are faulty.

- (a) Find the percentage of components bought from supplier C that are faulty.

(3)

A component is selected at random.

- (b) Explain why the event “the component was bought from supplier B ” is not statistically independent from the event “the component is faulty”.

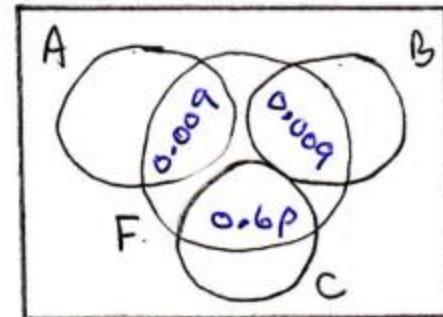

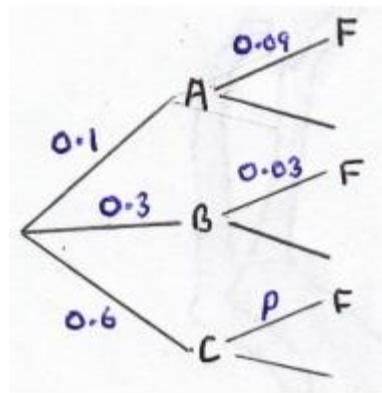

(1)

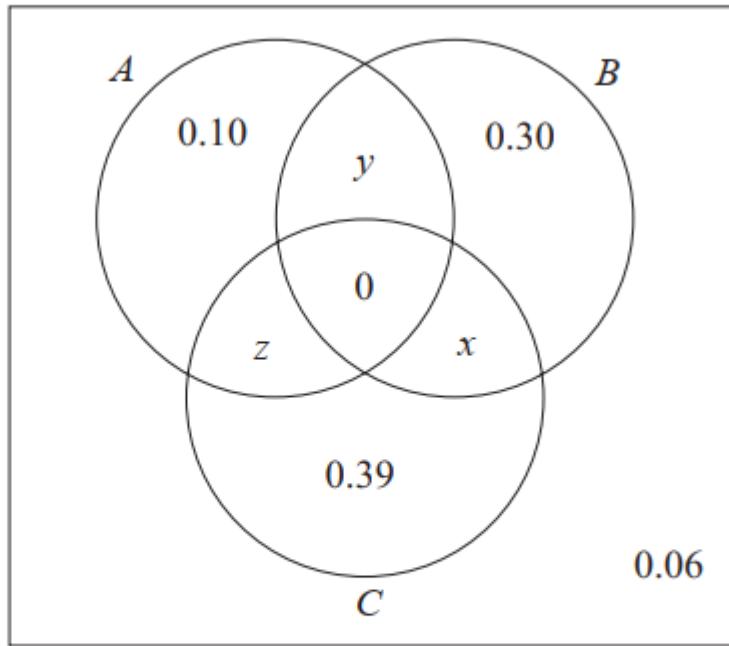

Qu	Scheme	Marks	AO
2 (a)	[Let $p = P(F C)$] Tree diagram or some other method to find an equation for p $0.1 \times 0.09 + 0.3 \times 0.03 + 0.6 \times p = 0.06$ $p = 0.07$ i.e. <u>7%</u>	M1 A1 A1 (3)	2.1 1.1b 1.1b
(b)	e.g. $P(B \text{ and } F) = 0.3 \times 0.03 = 0.009$ but $P(B) \times P(F) = 0.3 \times 0.06 = 0.018$ These are not equal so not independent	B1 (1)	2.4
			(4 marks)

Notes

(a)	M1 for selecting a suitable method to find the missing probability e.g. sight of tree diagram with 0.1, 0.3, 0.6 and 0.09, 0.03, p suitably placed e.g. sight of VD with 0.009 for $A \cap F$ and $B \cap F$ and $0.6p$ suitably placed or attempt an equation with at least one correct numerical and one “ p ” product (not necessarily correct) on LHS or for sight of $0.06 - (0.009 + 0.009)$ (o.e. e.g. $6 - 1.8 = 4.2\%$) 1 st A1 for a correct equation for p (May be implied by a correct answer) or for the expression $\frac{0.06 - (0.009 + 0.009)}{0.6}$ (o.e.) 2 nd A1 for 7% (accept 0.07) Correct Ans: Provided there is no incorrect working seen award 3/3 e.g. may just see tree diagram with 0.07 for p (probably from trial and improv')
(b)	B1 for a suitable explanation...may talk about 2 nd branches on tree diagram and point out that $0.03 \neq 0.06$ but need some supporting calculation/words Can condone incorrect use of set notation (it is not on AS spec) provided the rest of the calculations and words are correct.

2. The Venn diagram shows three events, A , B and C , and their associated probabilities.

Events B and C are mutually exclusive.

Events A and C are independent.

Showing your working, find the value of x , the value of y and the value of z .

(5)

Part	Working or answer an examiner might expect to see	Mark	Notes
	Events B and C are mutually exclusive so $x = 0$	B1	This mark is given for deducing that $x = 0$
	$P(A) = 0.1 + z + y$ $P(C) = 0.93 + z [+x]$ $P(A \text{ and } C) = z$	M1	This mark is given for identifying the probabilities required for independence
	$P(A \text{ and } C) = P(A) \times P(C)$ $(0.1 + z + y) \times (0.39 + z + 0) = z$	M1	This mark is given for using independence
	$\sum p = 1$ $0.06 + 0.3 + 0.39 + 0.1 + z + y + 0 = 1$	M1	This mark is given for using the fact that the sum of probabilities sum to 1
	$y + z = 0.15$ $z = (0.1 + 0.15) \times (0.39 + z)$ $z = 0.975 + 0.25z$ $0.75z = 0.0975$ $z = \frac{0.0975}{0.75} = 0.13$ $y = 0.15 - 0.13 = 0.02$	A1	This mark is given for finding the values of y and z

3. In a game, a player can score 0, 1, 2, 3 or 4 points each time the game is played.

The random variable S , representing the player's score, has the following probability distribution where a , b and c are constants.

s	0	1	2	3	4
$P(S = s)$	a	b	c	0.1	0.15

The probability of scoring less than 2 points is twice the probability of scoring at least 2 points.

Each game played is independent of previous games played.

John plays the game twice and adds the two scores together to get a total.

Calculate the probability that the total is 6 points.

	If both correct values of p are found and then added (get $\frac{61}{360}$), deduct final A1 only (i.e. 4/5)		

5. Manon has two biased spinners, one red and one green.

The random variable R represents the score when the red spinner is spun.

The random variable G represents the score when the green spinner is spun.

The probability distributions for R and G are given below.

r	2	3
$P(R = r)$	$\frac{1}{4}$	$\frac{3}{4}$

g	1	4
$P(G = g)$	$\frac{2}{3}$	$\frac{1}{3}$

Manon spins each spinner once and adds the two scores.

- (a) Find the probability that

- (i) the sum of the two scores is 7
- (ii) the sum of the two scores is less than 4

(3)

The random variable $X = mR + nG$ where m and n are integers.

$$P(X = 20) = \frac{1}{6} \quad \text{and} \quad P(X = 50) = \frac{1}{4}$$

- (b) Find the value of m and the value of n

(5)

1. Helen believes that the random variable C , representing cloud cover from the large data set, can be modelled by a discrete uniform distribution.

- (a) Write down the probability distribution for C .

(2)

- (b) Using this model, find the probability that cloud cover is less than 50%

(1)

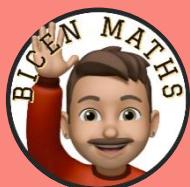

Helen used all the data from the large data set for Hurn in 2015 and found that the proportion of days with cloud cover of less than 50% was 0.315

- (c) Comment on the suitability of Helen's model in the light of this information.

(1)

- (d) Suggest an appropriate refinement to Helen's model.

(1)

The Binomial Distribution

AS SAMs

The Binomial Distribution

5. (a) The discrete random variable $X \sim B(40, 0.27)$

Find $P(X \geq 16)$

(2)

Past records suggest that 30% of customers who buy baked beans from a large supermarket buy them in single tins. A new manager suspects that there has been a change in the proportion of customers who buy baked beans in single tins. A random sample of 20 customers who had bought baked beans was taken.

- (b) Write down the hypotheses that should be used to test the manager's suspicion.

(1)

- (c) Using a 10% level of significance, find the critical region for a two-tailed test to answer the manager's suspicion. You should state the probability of rejection in each tail, which should be less than 0.05

(3)

- (d) Find the actual significance level of a test based on your critical region from part (c).

One afternoon the manager observes that 12 of the 20 customers who bought baked beans, bought their beans in single tins. (1)

- (e) Comment on the manager's suspicion in the light of this observation.

(1)

Later it was discovered that the local scout group visited the supermarket that afternoon to buy food for their camping trip.

- (f) Comment on the validity of the model used to obtain the answer to part (e), giving a reason for your answer.

3. A fair 5-sided spinner has sides numbered 1, 2, 3, 4 and 5

The spinner is spun once and the score of the side it lands on is recorded.

- (a) Write down the name of the distribution that can be used to model the score of the side it lands on.

(1)

The spinner is spun 28 times.

The random variable X represents the number of times the spinner lands on 2

- (b) (i) Find the probability that the spinner lands on 2 at least 7 times.

- (ii) Find $P(4 \leq X < 8)$

(5)

Question 3 (Total 6 marks)

Part	Working or answer an examiner might expect to see	Mark	Notes
(a)	Discrete uniform distribution	B1	This mark is given for the correct distribution
(b)(i)	$X \sim B(28, 0.2)$	B1	This mark is given for identifying the correct model
	$P(X \geq 7) = 1 - P(X \leq 6)$ $= 1 - 0.6784$	M1	This mark is given for a method to find the probability
	$= 0.322$	A1	This mark is given for finding the correct probability
(b)(ii)	$P(4 \leq X < 8) = P(X \leq 7) - P(X \leq 3)$ $= 0.818 - 0.160$	M1	This mark is given for a method to find the probability
	$= 0.658$	A1	This mark is given for finding the correct probability

5. Past records show that 15% of customers at a shop buy chocolate. The shopkeeper believes that moving the chocolate closer to the till will increase the proportion of customers buying chocolate.

After moving the chocolate closer to the till, a random sample of 30 customers is taken and 8 of them are found to have bought chocolate.

Julie carries out a hypothesis test, at the 5% level of significance, to test the shopkeeper's belief.

Julie's hypothesis test is shown below.

$$H_0 : p = 0.15$$

$$H_1 : p \geq 0.15$$

Let X = the number of customers who buy chocolate.

$$X \sim B(30, 0.15)$$

$$P(X = 8) = 0.0420$$

$$0.0420 < 0.05 \text{ so reject } H_0$$

There is sufficient evidence to suggest that the proportion of customers buying chocolate has increased.

- (a) Identify the first two errors that Julie has made in her hypothesis test. (2)
- (b) Explain whether or not these errors will affect the conclusion of her hypothesis test. Give a reason for your answer. (1)
- (c) Find, using a 5% level of significance, the critical region for a one-tailed test of the shopkeeper's belief. The probability in the tail should be less than 0.05 (2)
- (d) Find the actual level of significance of this test. (1)

Question 5 (Total 6 marks)

Part	Working or answer an examiner might expect to see	Mark	Notes
(a)	$H_1: p \geq 0$ is incorrect; it should be $H_1: p > 0$	B1	This mark is given for identifying the error in the alternative hypothesis
	The calculation of the test statistic $P(X = 8)$ is incorrect; it should be $P(X \geq 8)$	B1	This mark is given for identifying the error in the test statistic
(b)	The errors will affect the conclusion as the null hypothesis should not be rejected since $P(X \geq 8)$ [= 0.0698] is greater than 0.05	B1	This mark is given for a correct explanation
(c)	$P(X \leq 8) = 0.9722 > 0.95$ or $P(X \geq 9) = 0.0278 < 0.05$	M1	This mark is given for the use of tables or calculator to find the probability associated with the critical value with $B(30, 0.15)$
	Critical region: $\{X \geq 9\}$	A1	This mark is given for finding the correct critical region
(d)	0.0278	B1	This mark is given for finding the correct level of significance of the test

5. Afrika works in a call centre.

She assumes that calls are independent and knows, from past experience, that on each sales call that she makes there is a probability of $\frac{1}{6}$ that it is successful.

Afrika makes 9 sales calls.

- (a) Calculate the probability that at least 3 of these sales calls will be successful.

(2)

The probability of Afrika making a successful sales call is the same each day.

Afrika makes 9 sales calls on each of 5 different days.

- (b) Calculate the probability that at least 3 of the sales calls will be successful on exactly 1 of these days.

(2)

Rowan works in the same call centre as Afrika and believes he is a more successful salesperson.

To check Rowan's belief, Afrika monitors the next 35 sales calls Rowan makes and finds that 11 of the sales calls are successful.

- (c) Stating your hypotheses clearly test, at the 5% level of significance, whether or not there is evidence to support Rowan's belief.

(4)

Question	Scheme	Marks	AOs
5(a)	Let C = the number of successful calls. $C \sim B\left(9, \frac{1}{6}\right)$	M1	3.3
	$P(C \geq 3) = 1 - P(C \leq 2) = 0.1782\dots$ awrt 0.178	A1	1.1b (2)

4. A nursery has a sack containing a large number of coloured beads of which 14% are coloured red.

Aliya takes a random sample of 18 beads from the sack to make a bracelet.

- (a) State a suitable binomial distribution to model the number of red beads in Aliya's bracelet.

(1)

- (b) Use this binomial distribution to find the probability that

- (i) Aliya has just 1 red bead in her bracelet,
- (ii) there are at least 4 red beads in Aliya's bracelet.

(3)

- (c) Comment on the suitability of a binomial distribution to model this situation.

(1)

After several children have used beads from the sack, the nursery teacher decides to test whether or not the proportion of red beads in the sack has changed.

She takes a random sample of 75 beads and finds 4 red beads.

- (d) Stating your hypotheses clearly, use a 5% significance level to carry out a suitable test for the teacher.

(4)

- (e) Find the p -value in this case.

(1)

4. Magali is studying the mean total cloud cover, in oktas, for Leuchars in 1987 using data from the large data set. The daily mean total cloud cover for all 184 days from the large data set is summarised in the table below.

Daily mean total cloud cover (oktas)	0	1	2	3	4	5	6	7	8
Frequency (number of days)	0	1	4	7	10	30	52	52	28

One of the 184 days is selected at random.

- (a) Find the probability that it has a daily mean total cloud cover of 6 or greater. (1)

Magali is investigating whether the daily mean total cloud cover can be modelled using a binomial distribution.

She uses the random variable X to denote the daily mean total cloud cover and believes that $X \sim B(8, 0.76)$

Using Magali's model,

- (b) (i) find $P(X \geq 6)$ (2)

- (ii) find, to 1 decimal place, the expected number of days in a sample of 184 days with a daily mean total cloud cover of 7 (2)

- (c) Explain whether or not your answers to part (b) support the use of Magali's model. (1)

There were 28 days that had a daily mean total cloud cover of 8

For these 28 days the daily mean total cloud cover for the **following** day is shown in the table below.

Daily mean total cloud cover (oktas)	0	1	2	3	4	5	6	7	8
Frequency (number of days)	0	0	1	1	2	1	5	9	9

- (d) Find the proportion of these days when the daily mean total cloud cover was 6 or greater. (1)

- (e) Comment on Magali's model in light of your answer to part (d). (2)

Part	Working or answer an examiner might expect to see	Mark	Notes
(a)	$\frac{523 + 52 + 28}{184} = \frac{132}{184} = 0.717$	B1	This mark is given for a correct value for the probability for the cloud cover
(b)(i)	$P(X \geq 6) = 1 - P(X \leq 5)$	M1	This mark is given for using $1 - P(X \leq 5)$ with $B(8, 0.76)$
	$= 1 - 0.2967$ $= 0.703$	A1	This mark is given for finding as correct value for the probability
(b)(ii)	$184 \times P(X = 7)$ $= 184 \times 0.2811$	M1	This mark is given for using $184 \times P(X = 7)$ with $B(8, 0.76)$
	$= 51.7$	A1	This mark is given for finding as correct value for the probability
(c)	The answer to part (b)(i) of 0.703 is similar to 0.7127 in part (a) The answer to part (b)(ii) of 51.7 is very close to 52 found in the data set	B1	This mark is given for a correct evaluation of the outcomes from part (b) to determine the appropriateness of Magali's model
(d)	$\frac{5 + 9 + 9}{28} = \frac{23}{28} = 0.821$	B1	This mark is given for a correct value for the probability for the cloud cover
(e)	The answer to part (d) of 0.821 is greater than that in part (a) of 0.717 This shows that there is a higher chance of having high cloud cover if the previous day had high cloud cover	B1	This mark is given for a correct comparison for the answer to part (d) with the data set
	Thus independence does not hold so a binomial model might not be suitable	B1	This mark is given for a correct conclusion stated

1. (a) State one disadvantage of using quota sampling compared with simple random sampling.

(1)

In a university 8% of students are members of the university dance club.

A random sample of 36 students is taken from the university.

The random variable X represents the number of these students who are members of the dance club.

- (b) Using a suitable model for X , find

(i) $P(X = 4)$

(ii) $P(X \geq 7)$

(3)

Only 40% of the university dance club members can dance the tango.

- (c) Find the probability that a student is a member of the university dance club and can dance the tango.

(1)

A random sample of 50 students is taken from the university.

- (d) Find the probability that fewer than 3 of these students are members of the university dance club and can dance the tango.

(2)

(6 marks)			

Regression and Correlation

2. A meteorologist believes that there is a relationship between the daily mean windspeed, w kn, and the daily mean temperature, t °C. A random sample of 9 consecutive days is taken from past records from a town in the UK in July and the relevant data is given in the table below.

t	13.3	16.2	15.7	16.6	16.3	16.4	19.3	17.1	13.2
w	7	11	8	11	13	8	15	10	11

The meteorologist calculated the product moment correlation coefficient for the 9 days and obtained $r = 0.609$

- (a) Explain why a linear regression model based on these data is unreliable on a day when the mean temperature is 24 °C (1)
- (b) State what is measured by the product moment correlation coefficient. (1)
- (c) Stating your hypotheses clearly test, at the 5% significance level, whether or not the product moment correlation coefficient for the population is greater than zero. (3)

Using the same 9 days a location from the large data set gave $\bar{t} = 27.2$ and $\bar{w} = 3.5$

- (d) Using your knowledge of the large data set, suggest, giving your reason, the location that gave rise to these statistics. (1)

Question	Scheme	Marks	AOs
2(a)	e.g. It requires extrapolation so will be unreliable (o.e.)	B1	1.2
		(1)	
(b)	e.g. Linear association between w and t	B1	1.2
		(1)	
(c)	$H_0: \rho = 0$ $H_1: \rho > 0$	B1	2.5
	Critical value 0.5822	M1	1.1a
	Reject H_0		
	There is evidence that the product moment correlation coefficient is greater than 0	A1	2.2b
		(3)	
(d)	Higher \bar{t} suggests overseas and not Perth...lower wind speed so perhaps not close to the sea so suggest Beijing	B1	2.4
		(1)	
(6 marks)			
Notes:			
(a)			
B1: for a correct statement (unreliable) with a suitable reason			
(b)			
B1: for a correct statement			
(c)			
B1: for both hypotheses in terms of ρ			
M1: for selecting a suitable 5% critical value compatible with their H_1			
A1: for a correct conclusion stated			
(d)			
B1: for suggesting Beijing with some supporting reason based on t or w			
Allow Jacksonville with a reason based just on higher \bar{t}			

2. Tessa owns a small clothes shop in a seaside town. She records the weekly sales figures, £ w , and the average weekly temperature, $t^{\circ}\text{C}$, for 8 weeks during the summer.
The product moment correlation coefficient for these data is -0.915

(a) Stating your hypotheses clearly and using a 5% level of significance, test whether or not the correlation between sales figures and average weekly temperature is negative.

(3)

(b) Suggest a possible reason for this correlation.

(1)

Tessa suggests that a linear regression model could be used to model these data.

(c) State, giving a reason, whether or not the correlation coefficient is consistent with Tessa's suggestion.

(1)

(d) State, giving a reason, which variable would be the explanatory variable.

(1)

Tessa calculated the linear regression equation as $w = 10\ 755 - 171t$

(e) Give an interpretation of the gradient of this regression equation.

(1)

Qu 2	Scheme	Marks	AO
(a)	$H_0: \rho = 0$ $H_1: \rho < 0$ Critical value: -0.6215 (Allow any cv in range $0.5 < cv < 0.75$) $r < -0.6215$ so significant result and there is evidence of a negative correlation between w and t	B1 M1 A1 (3)	2.5 1.1a 2.2b
(b)	e.g. As temperature increases people spend more time on the beach and less time shopping (o.e.)	B1	2.4
(c)	Since r is close to -1 , it is consistent with the suggestion	B1	2.4
(d)	t will be the explanatory variable since sales are likely to depend on the temperature	B1	2.4
(e)	Every degree rise in temperature leads to a drop in weekly earnings of £171	B1 (1)	3.4
			(7 marks)

	Notes
(a)	B1 for both hypotheses in terms of ρ M1 for the critical value: sight of ± 0.6215 or any cv such that $0.5 < cv < 0.75$ A1 must reject H_0 on basis of comparing -0.915 with -0.6215 (if $-0.915 < -0.6215$ is seen then A0 but may use $ r $ o.e. which is fine) and mention "negative", "correlation/relationship" and at least "w" and "t"
(b)	B1 for a suitable <u>reason to explain</u> negative correlation using the context given. e.g. "As temperature drops people are more likely to go shopping (than to the beach)" e.g. "As temperature increases people will be outside rather than in shops" A mere description in context of negative correlation is B0 SO e.g. "As temperature increases people don't want to go shopping/buy clothes" is B0 e.g. "Less clothes needed as temp increases" is B0
(c)	B1 for a suitable reason e.g. "strong"/"significant"/"near perfect" "correlation", $ r $ close to 1 and saying it is consistent with the suggestion. Allow "yes" followed by the reason.
(d)	B1 For identifying t and giving a suitable reason. Need idea that " w depends on t " or " w responds to t " or " t affects w " (o.e.) Allow t (temperature) <u>affects</u> the other variable etc Just saying " t is the independent variable" or " t explains change in w " is B0 N.B. Suggesting causation is B0 e.g. " t causes w to decrease"
(e)	B1 for a description that conveys the idea of rate per degree Celsius. Must have 171, condone missing "£" sign.

3. Barbara is investigating the relationship between average income (GDP per capita), x US dollars, and average annual carbon dioxide (CO_2) emissions, y tonnes, for different countries.

She takes a random sample of 24 countries and finds the product moment correlation coefficient between average annual CO_2 emissions and average income to be 0.446

- (a) Stating your hypotheses clearly, test, at the 5% level of significance, whether or not the product moment correlation coefficient for all countries is greater than zero.

(3)

Barbara believes that a non-linear model would be a better fit to the data.

She codes the data using the coding $m = \log_{10}x$ and $c = \log_{10}y$ and obtains the model $c = -1.82 + 0.89m$

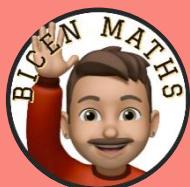

The product moment correlation coefficient between c and m is found to be 0.882

- (b) Explain how this value supports Barbara's belief.

(1)

- (c) Show that the relationship between y and x can be written in the form $y = ax^n$ where a and n are constants to be found.

(5)

Part	Working or answer an examiner might expect to see	Mark	Notes
(a)	$H_0: \rho = 0$ $H_1: \rho > 0$	B1	This mark is given for both hypotheses in terms of ρ found correctly
	For sample size 24 at the 5% level of significance, the critical value = 0.3438	M1	This mark is given for selecting a suitable critical value compatible with H_1
	$0.446 > 0.3438$, so reject H_0 There is evidence that the product moment correlation coefficient (<u>pmcc</u>) is greater than 0	A1	This mark is given for a correct conclusion stated
(b)	The value of the <u>pmcc</u> is close to 1 so there is a strong positive correlation	B1	This mark is given for a correct explanation about the strength of the correlation
(c)	$\log_{10} y = -1.82 + 0.89 \log_{10} x$	M1	This mark is given for a correct substitution of both c and m
	$y = 10^{-1.82 + 0.89 \log x}$	M1	This mark is given for dealing with logs to find an expression in terms of y
	$y = 10^{-1.82} \times 10^{0.89 \log x}$ $y = 10^{-1.82} \times 10^{(\log x)^{0.89}}$	M1	This mark is given for a method to find values for a and n
	$y = 0.015 \times x^{0.89}$	A1	This mark is given for find a correct value of $a = 0.015$
		A1	This mark is given for find a correct value of $n = 0.89$

2. A random sample of 15 days is taken from the large data set for Perth in June and July 1987.

The scatter diagram in Figure 1 displays the values of two of the variables for these 15 days.

- (a) Describe the correlation.

The variable on the x -axis is Daily Mean Temperature measured in °C.

- (b) Using your knowledge of the large data set,

- suggest which variable is on the y -axis,
- state the units that are used in the large data set for this variable.

Stav believes that there is a correlation between Daily Total Sunshine and Daily Maximum Relative Humidity at Heathrow.

He calculates the product moment correlation coefficient between these two variables for a random sample of 30 days and obtains $r = -0.377$

- (c) Carry out a suitable test to investigate Stav's belief at a 5% level of significance.

State clearly

- your hypotheses
- your critical value

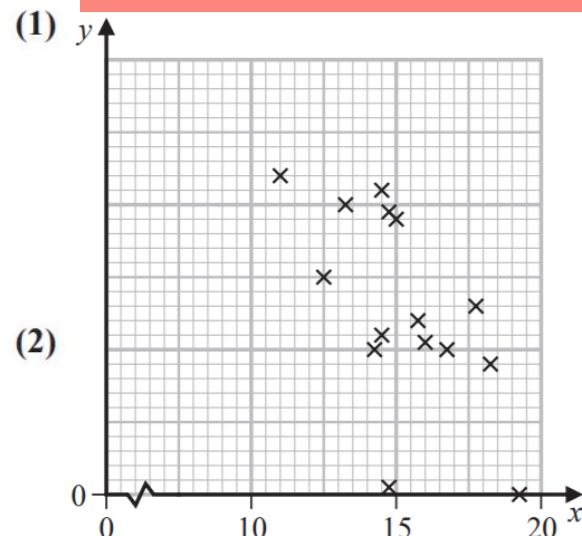

Figure 1

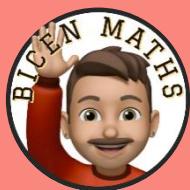

On a random day at Heathrow the Daily Maximum Relative Humidity was 97%

- (d) Comment on the number of hours of sunshine you would expect on that day, giving a reason for your answer.

(3)

(1)

Qu 2	Scheme	Marks	AO
(a)	Negative	B1	1.2
(b)(i)	Rainfall mm or Pressure hPa or Pascals or hectopascals or mb or millibars	B1 B1ft	(1) 2.2b 1.1b
(ii)			(2)
(c)	$H_0 : \rho = 0$ $H_1 : \rho \neq 0$ Critical value: $-0.361(0)$ $r < -0.3610$ so significant result and there is evidence of a correlation between Daily Total <u>Sunshine</u> and Daily Maximum Relative <u>Humidity</u>	B1 M1 A1	2.5 1.1b 2.2b
(d)	Humidity is high and there is evidence of correlation and $r < 0$ So expect amount of sunshine to be <u>lower</u> than the <u>average</u> for Heathrow(oe)	B1	(3) 2.2b (1)
			(7 marks)

	Notes
(a)	B1 for stating negative. “Negative skew” is B0 though
(b)(i)	B1 for mentioning “rainfall” (allow “rain” <u>or</u> “precipitation”) <u>or</u> “pressure” (if more than 1 answer both must be correct) NB the other quantitative variable for Perth is: Daily Mean Wind Speed and scores B0 [Not allowed “wind speed” since $r = +0.15$ and in winter might expect wind to raise temp]
(ii)	B1ft for giving the correct units. If Daily Mean Wind Speed (kn) or knots “Wind speed” and “knots” would score B0B1 but any other variable scores B0B0
(c)	B1 for both hypotheses correct in terms of ρ M1 for the correct critical value compatible with their H_1 : allow $\pm 0.361(0)$ If the hypotheses are 1-tail then allow cv of ± 0.3061 e.g. Alternative hypothesis with $r < \pm 0.377$ implies a one-tail test <u>or</u> H_0 and H_1 in words saying “ H_0 : there is no correlation, H_1 : there is correlation” is two-tail If there are no hypotheses (or they are nonsensical) assume 2-tail so M1 for $\pm 0.361(0)$ A1 for a correct conclusion in context based on comparing -0.377 with their cv. Condone incorrect inequality e.g. $-0.3610 < -0.377$ as long as they reject H_0 Do not accept contradictory statements such as “accept H_0 so there is evidence of ...” Can say “support for Stav’s <u>belief</u> ”(o.e.e.g. “claim”) or “evidence of a correlation between <u>sunshine</u> and <u>humidity</u> ” condone “negative correlation” or comments such as “if humidity is high amount of sunshine will be low”
(d)	B1 for stating <u>low</u> amount of sunshine (o. e.) and some reference to $r < 0$ or fog Check for the following 2 features: (i) low sunshine: allow ≤ 5 hrs (LDS mean for 2015 is 5.3, humidity 97% is 4.1, $\geq 97\%$ is 3.1) (ii) negative correlation may be described in words e.g. “high humidity gives low sunshine” <u>or</u> fog (LDS says $>95\%$ humidity is foggy) so less sunshine

2. Marc took a random sample of 16 students from a school and for each student recorded

- the number of letters, x , in their last name
- the number of letters, y , in their first name

His results are shown in the scatter diagram on the next page.

(a) Describe the correlation between x and y .

(1)

Marc suggests that parents with long last names tend to give their children shorter first names.

(b) Using the scatter diagram comment on Marc's suggestion, giving a reason for your answer.

(1)

The results from Marc's random sample of 16 observations are given in the table below.

x	3	6	8	7	5	3	11	3	4	5	4	9	7	10	6	6
y	7	7	4	4	6	8	5	5	8	4	7	4	5	5	6	3

(c) Use your calculator to find the product moment correlation coefficient between x and y for these data.

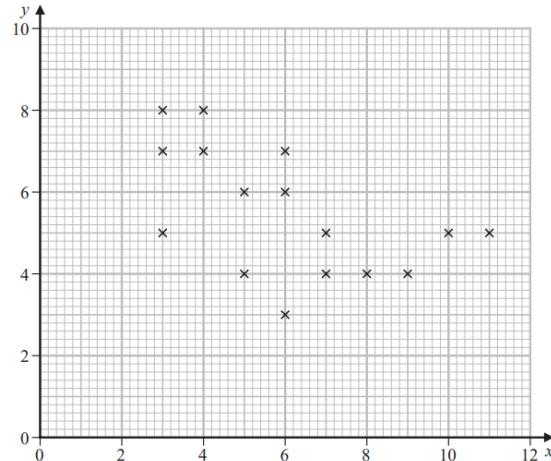

(1)

(d) Test whether or not there is evidence of a negative correlation between the number of letters in the last name and the number of letters in the first name.

You should

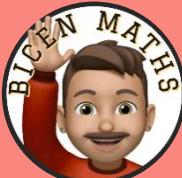

- state your hypotheses clearly
- use a 5% level of significance

(3)

Qu 2	Scheme	Marks	AO
(a)	Negative	B1 (1)	1.2
(b)	Marc's suggestion is compatible because it's negative correlation	B1 (1)	2.4
(c)	$r = -0.54458266\dots$ awrt <u>-0.545</u>	B1 (1)	1.1b
(d)	$H_0: \rho = 0 \quad H_1: \rho < 0$ [5% 1-tail cv =] <u>(\pm) 0.4259</u> (significant result / reject H_0) There is evidence of negative correlation between the number of letters in (or length of) a student's last name and their first name	B1 M1 A1 (3)	1.1a 2.5 1.1a 2.2b
			(6 marks)

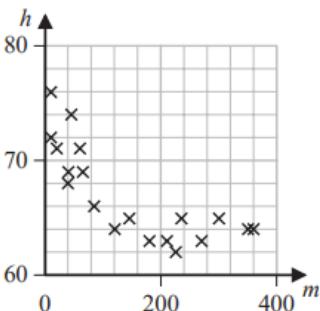

Notes	
(a)	B1 for "negative" Allow "slight" or "weak" etc Allow a description e.g. "as x increases y decreases" or in context e.g. "people with longer last names tend to have shorter first names" A comment of "negative skew" is B0 Need to see distinct or separate responses for (a) and (b)
(b)	B1 for a comment that suggests data is compatible with the suggestion and a suitable reason such as "there is negative correlation" <u>or</u> a description in x and y or in context <u>or</u> the points lie close to a line with negative gradient <u>or</u> draw line $y = x$ and state that more points below the line so supports (or is compatible with) his suggestion A reason based on just a single point is B0 e.g. "11 letters in last name has only 5 in first name"
(c)	B1 for awrt -0.545
(d)	B1 for both hypotheses correct in terms of ρ M1 for a critical value compatible with their H_1 : 1-tail: awrt ± 0.426 (<u>condone ± 0.425</u>) or 2-tail (B0 scored for H_1) : awrt ± 0.497 If hypotheses are in words and can deduce whether one or two-tail then use their words. If no hypotheses or their H_1 is not clearly one or two tail assume one-tail A1 for compatible signs between cv and r and a correct conclusion in context mentioning correlation and number of letters or length and name (ft their value from (c)) Do NOT award this A mark if contradictory comments or working seen e.g. "accept H_0 " or comparison of 0.426 with significance level of 0.05 etc The M1A1 can be scored independently of the hypotheses
NB	

6. Anna is investigating the relationship between exercise and resting heart rate. She takes a random sample of 19 people in her year at school and records for each person

- their resting heart rate, h beats per minute
- the number of minutes, m , spent exercising each week

Her results are shown on the scatter diagram.

- (a) Interpret the nature of the relationship between h and m

Regression and Correlation

(1)

Anna codes the data using the formulae

$$\begin{aligned}x &= \log_{10} m \\y &= \log_{10} h\end{aligned}$$

The product moment correlation coefficient between x and y is -0.897

- (b) Test whether or not there is significant evidence of a negative correlation between x and y

You should

- state your hypotheses clearly
- use a 5% level of significance
- state the critical value used

(3)

The equation of the line of best fit of y on x is

$$y = -0.05x + 1.92$$

- (c) Use the equation of the line of best fit of y on x to find a model for h on m in the form

$$h = am^k$$

where a and k are constants to be found.

(5)

Question	Scheme	Marks	AOs

Conditional Probability

4. Given that

$$P(A) = 0.35 \quad P(B) = 0.45 \quad \text{and} \quad P(A \cap B) = 0.13$$

find

(a) $P(A' | B')$ (2)

(b) Explain why the events A and B are not independent. (1)

The event C has $P(C) = 0.20$

The events A and C are mutually exclusive and the events B and C are statistically independent.

(c) Draw a Venn diagram to illustrate the events A , B and C , giving the probabilities for each region. (5)

(d) Find $P([B \cup C]')$ (2)

4(a)	$P(A' B') = \frac{P(A' \cap B')}{P(B')}$ or $\frac{0.33}{0.55}$	M1	Notes: (a) M1: for a correct ratio of probabilities formula and at least one correct value. A1: a correct answer (b) for a fully correct explanation: correct probabilities and correct comparisons.
	$= \frac{3}{5}$ or 0.6	A1	
		(2)	
(b)	e.g. $P(A) \times P(B) = \frac{7}{20} \times \frac{9}{20} = \frac{63}{400} \neq P(A \cap B) = 0.13 = \frac{52}{400}$ or $P(A' B') = 0.6 \neq P(A') = 0.65$	B1	 (c) B1: for box with B intersecting A and C but C not intersecting A . (Or accept three intersecting circles, but with zeros entered for $A \cap C$ and $A \cap B \cap C$) No box is B0 M1: for method for finding $P(B \cap C)$ A1: for 0.09 M1: for 0.13 and their 0.09 in correct places and method for their 0.23 A1: fully correct
		(1)	
(c)		B1	 (d) M1: for a correct expression – fit their probabilities from their Venn diagram. A1: cao
		M1	
		A1	
		(5)	
		M1	
(d)	$P(B \cup C)' = 0.22 + 0.22$ or $1 - [0.56]$ o.e. or $1 - [0.13 + 0.23 + 0.09 + 0.11]$	M1	
	$= 0.44$	A1	
		(2)	

3. In an experiment a group of children each repeatedly throw a dart at a target. For each child, the random variable H represents the number of times the dart hits the target in the first 10 throws.

Peta models H as $B(10, 0.1)$

- (a) State two assumptions Peta needs to make to use her model.

(2)

- (b) Using Peta's model, find $P(H \geq 4)$

(1)

For each child the random variable F represents the number of the throw on which the dart first hits the target.

Using Peta's assumptions about this experiment,

- (c) find $P(F = 5)$

(2)

Thomas assumes that in this experiment no child will need more than 10 throws for the dart to hit the target for the first time. He models $P(F = n)$ as

$$P(F = n) = 0.01 + (n - 1) \times \alpha$$

where α is a constant.

- (d) Find the value of α

(4)

- (e) Using Thomas' model, find $P(F = 5)$

(1)

- (f) Explain how Peta's and Thomas' models differ in describing the probability that a dart hits the target in this experiment.

(1)

Qu 3	Scheme	Marks	AO										
(a)	The probability of a dart hitting the target is constant (from child to child and for each throw by each child) (o.e.) The throws of each of the darts are independent (o.e.)	B1	1.2

(e)	$P(F = 5 \text{ Thomas' model}) = \underline{0.09}$												
(f)	Peta's model assumes the probability of hitting target is constant (o.e.) and Thomas' model assumes this probability increases with each attempt(o.e.)												
			(11 marks)										

Notes

(a)	1 st B1 for stating that the probability (or possibility or chance) is constant (or fixed or same) 2 nd B1 for stating that throws are independent ["trials" are independent is B0]
(b)	B1 for awrt 0.0128 (found on calculator)
(c)	M1 for a probability expression of the form $(1-p)^4 \times p$ where $0 < p < 1$ A1 for awrt 0.0656
SC	Allow M1A0 for answer only of 0.066
(d)	1 st M1 for setting up the distribution of F with at least 3 correct values of n and $P(F = n)$ in terms of α . (Can be implied by 2 nd M1 or 1 st A1) 2 nd M1 for use of sum of probs = 1 and clear summation or use of arithmetic series formula (allow 1 error or missing term). (Can be implied by 1 st A1) 1 st A1 for a correct equation for α 2 nd A1 for $\alpha = 0.02$ (must be exact and come from correct working)
(e)	B1ft for value resulting from $0.01 + 4 \times \text{"their } \alpha\text{"}$ (provided α and the answer are probs) Beware If their answer is the same as their (c) (or a rounded version of their (c)) score B0
(f)	B1 for a suitable comment about the probability of hitting the target Allow idea that Peta's model suggests the dart may never hit the target but Thomas' says that it will hit at least once (in the first 10 throws).

1. Three bags, A , B and C , each contain 1 red marble and some green marbles.

Bag A contains 1 red marble and 9 green marbles only

Bag B contains 1 red marble and 4 green marbles only

Bag C contains 1 red marble and 2 green marbles only

Sasha selects at random one marble from bag A .

If he selects a red marble, he stops selecting.

If the marble is green, he continues by selecting at random one marble from bag B .

If he selects a red marble, he stops selecting.

If the marble is green, he continues by selecting at random one marble from bag C .

- (a) Draw a tree diagram to represent this information.

(2)

- (b) Find the probability that Sasha selects 3 green marbles.

(2)

- (c) Find the probability that Sasha selects at least 1 marble of each colour.

(2)

- (d) Given that Sasha selects a red marble, find the probability that he selects it from bag B .

(2)

		A1	This mark is given for the correct probability that Sasha selects three marbles
(c)	$\frac{9}{10} \times \frac{1}{5} + \frac{4}{5} \times \frac{1}{3}$ $= \frac{21}{50}$	M1	This mark is given for the addition of two products
		A1	This mark is given for the correct probability that Sasha selects at least one marble of each colour
(d)	$P(\text{red from } B \mid \text{red selected}) =$ $\frac{\frac{9}{10} \times \frac{1}{5}}{1 - \frac{12}{25}} = \frac{9}{50} \times \frac{25}{13}$ $= \frac{9}{26}$	M1	This mark is given for determining the correct ratio of probabilities
		A1	This mark is given for the correct probability that Sasha selects a red marble from bag B

1. The Venn diagram shows the probabilities associated with four events, A , B , C and D

(a) Write down any pair of mutually exclusive events from A , B , C and D

(1)

Given that $P(B) = 0.4$

(b) find the value of p

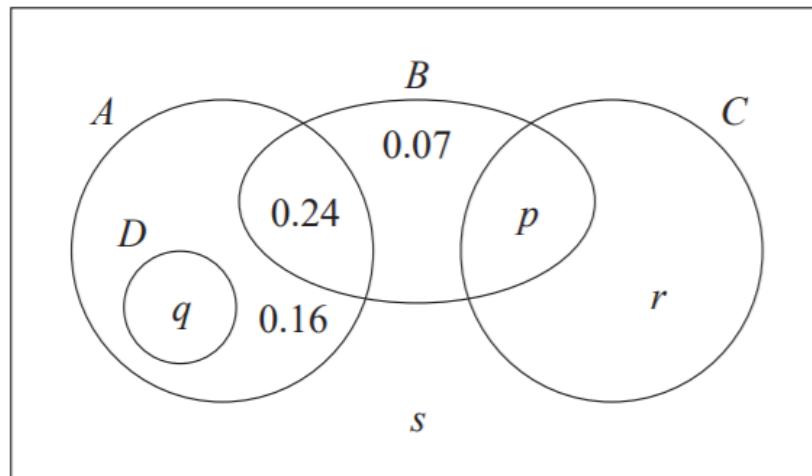

(1)

Given also that A and B are independent

(c) find the value of q

(2)

Given further that $P(B' | C) = 0.64$

(d) find

(i) the value of r

(4)

(ii) the value of s

Qu 1	Scheme	Marks	AO
(a)	$A, C \text{ or } D, B \text{ or } D, C$	B1 (1)	1.2
(b)	$[p = 0.4 - 0.07 - 0.24 =] \quad \underline{\text{0.09}}$	B1 (1)	1.1b
(c)	A and B independent implies $P(A) \times 0.4 = 0.24 \text{ or } (q + 0.16 + 0.24) \times 0.4 = 0.24$ $\text{so } P(A) = 0.6 \text{ and } q = \underline{\text{0.20}}$	M1 (2)	1.1b
(d)(i)	$P(B' C) = 0.64$ gives $\frac{r}{r+p} = 0.64 \text{ or } \frac{r}{r+0.09} = 0.64$ $r = 0.64r + 0.64 \text{ "p"} \text{ so } 0.36r = 0.0576 \text{ so } r = \underline{\text{0.16}}$	M1 (2)	3.1a
(ii)	Using sum of probabilities = 1 e.g. “0.6” + 0.07 + “0.25” + $s = 1$ $\text{so } s = \underline{\text{0.08}}$	M1 (4)	1.1b 1.1b
			(8 marks)

	(a) B1 for one correct pair. If more than one pair they must all be correct. Condone in a correct probability statement such as $P(A \cap C) = 0$ or correct use of set notation e.g. $A \cap C = \emptyset$ BUT e.g. "P(A) and P(C) are mutually exclusive" alone is B0
(b)	B1 for $p = 0.09$ (Maybe stated in Venn Diagram [VD]) [If values in VD and text conflict, take text or a value <u>used</u> in a later part]
(c)	M1 for a correct equation in one variable for $P(A)$ or q using independence <u>or</u> for seeing both $P(A \cap B) = P(A) \times P(B)$ <u>and</u> $0.24 = 0.6 \times 0.4$ Also for $q = 0.20$ or exact equivalent (dep on correct use of independence)
Beware	Use of $P(A) = 1 - P(B) = 0.6$ leading to $q = 0.2$ scores M0A0
(d)(i)	1 st M1 for use of $P(B' C) = 0.64$ leading to a correct equation in r and possibly p . Can ft their p provided $0 < p < 1$ 1 st A1 for $r = 0.16$ or exact equivalent
(ii)	2 nd M1 for use of total probability = 1 to form a linear equation in s . Allow p, q, r etc Can follow through their values provided each of p, q, r are in $[0, 1]$ 2 nd A1 for $s = 0.08$ or exact equivalent

Note: this is included in A2 section as it contains A2 Pure Series content. The Statistics is AS standard.

4. The discrete random variable D has the following probability distribution

d	10	20	30	40	50
$P(D = d)$	$\frac{k}{10}$	$\frac{k}{20}$	$\frac{k}{30}$	$\frac{k}{40}$	$\frac{k}{50}$

where k is a constant.

- (a) Show that the value of k is $\frac{600}{137}$

(2)

The random variables D_1 and D_2 are independent and each have the same distribution as D .

- (b) Find $P(D_1 + D_2 = 80)$

Give your answer to 3 significant figures.

(3)

A single observation of D is made.

The value obtained, d , is the common difference of an arithmetic sequence.

The first 4 terms of this arithmetic sequence are the angles, measured in degrees, of quadrilateral Q

- (c) Find the exact probability that the smallest angle of Q is more than 50°

(5)

Note: this is included in A2 section as it contains A2 Pure Series content. The Statistics is AS standard.

Qu 4	Scheme	Marks	AO
(a)	$\frac{k}{10} + \frac{k}{20} + \frac{k}{30} + \frac{k}{40} + \frac{k}{50} = 1$ or $\frac{1}{600}(60k + 30k + 20k + 15k + 12k) = 1$ So $k = \frac{600}{137}$ (*)	M1 A1cso (2)	1.1b 1.1b 2.1

[Must be in the form $pa + qd = N$] 3rd M1 for examining cases and getting $d = 10$ and $d = 20$ only 2nd A1 for $\frac{90}{137}$ or exact equivalent</p> <p>The correct answer and no obviously incorrect working will score 5/5 A final answer of awrt 0.657 (0.65693...) with no obviously incorrect working scores 4/5</p>

4. A large college produces three magazines.

One magazine is about green issues, one is about equality and one is about sports.

A student at the college is selected at random and the events G , E and S are defined as follows

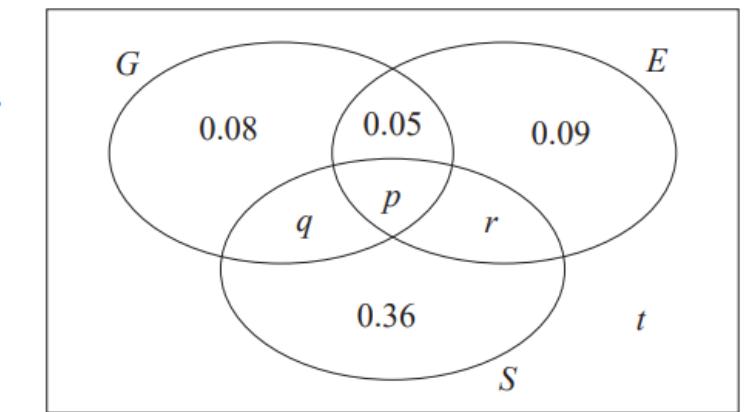

G is the event that the student reads the magazine about green issues

E is the event that the student reads the magazine about equality

S is the event that the student reads the magazine about sports

The Venn diagram, where p , q , r and t are probabilities, gives the probability for each subset.

- (a) Find the proportion of students in the college who read exactly one of these magazines.

(1)

No students read all three magazines and $P(G) = 0.25$

- (b) Find

- (i) the value of p
- (ii) the value of q

(3)

Given that $P(S | E) = \frac{5}{12}$

- (c) find

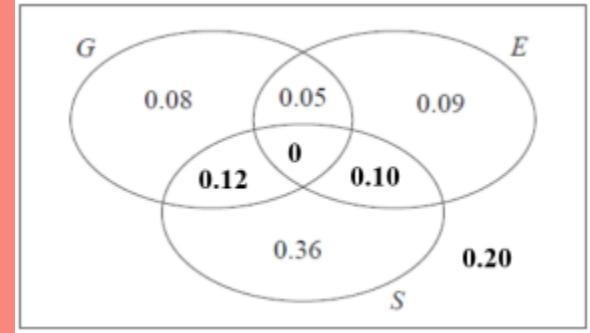

- (i) the value of r
- (ii) the value of t

(4)

- (d) Determine whether or not the events $(S \cap E')$ and G are independent.
Show your working clearly.

5. A company has 1825 employees.
The employees are classified as professional, skilled or elementary.

The following table shows

- the number of employees in each classification
- the two areas, A or B , where the employees live

	A	B
Professional	740	380
Skilled	275	90
Elementary	260	80

An employee is chosen at random.

Find the probability that this employee

(a) is skilled,

(1)

(b) lives in area B and is not a professional.

(1)

Some classifications of employees are more likely to work from home.

- 65% of professional employees in both area A and area B work from home
- 40% of skilled employees in both area A and area B work from home
- 5% of elementary employees in both area A and area B work from home
- Event F is that the employee is a professional
- Event H is that the employee works from home
- Event R is that the employee is from area A

(c) Using this information, complete the Venn diagram on the opposite page.

(4)

(d) Find $P(R' \cap F)$

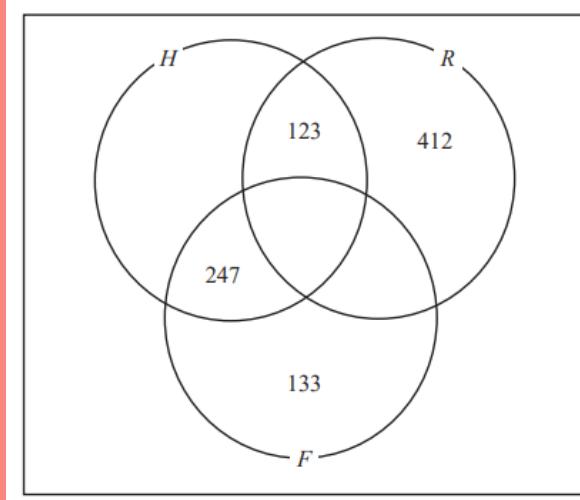

(1)

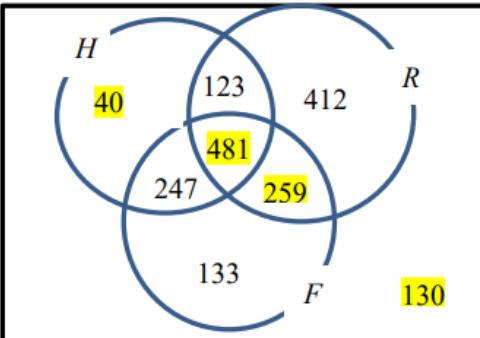

(e) Find $P([H \cup R]')$

(1)

(f) Find $P(F | H)$

The Normal Distribution

1. The number of hours of sunshine each day, y , for the month of July at Heathrow are summarised in the table below.

Hours	$0 \leq y < 5$	$5 \leq y < 8$	$8 \leq y < 11$	$11 \leq y < 12$	$12 \leq y < 14$
Frequency	12	6	8	3	2

A histogram was drawn to represent these data. The $8 \leq y < 11$ group was represented by a bar of width 1.5 cm and height 8 cm.

- (a) Find the width and the height of the $0 \leq y < 5$ group. (3)
- (b) Use your calculator to estimate the mean and the standard deviation of the number of hours of sunshine each day, for the month of July at Heathrow.
Give your answers to 3 significant figures. (3)

The mean and standard deviation for the number of hours of daily sunshine for the same month in Hurn are 5.98 hours and 4.12 hours respectively.

Thomas believes that the further south you are the more consistent should be the number of hours of daily sunshine.

- (c) State, giving a reason, whether or not the calculations in part (b) support Thomas' belief. (2)
- (d) Estimate the number of days in July at Heathrow where the number of hours of sunshine is more than 1 standard deviation above the mean. (2)

Helen models the number of hours of sunshine each day, for the month of July at Heathrow by $N(6.6, 3.7^2)$.

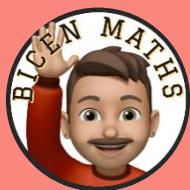

- (e) Use Helen's model to predict the number of days in July at Heathrow when the number of hours of sunshine is more than 1 standard deviation above the mean. (2)
- (f) Use your answers to part (d) and part (e) to comment on the suitability of Helen's model. (1)

3. A machine cuts strips of metal to length L cm, where L is normally distributed with standard deviation 0.5 cm.

Strips with length either less than 49 cm or greater than 50.75 cm **cannot** be used.

Given that 2.5% of the cut lengths exceed 50.98 cm,

- (a) find the probability that a randomly chosen strip of metal **can** be used.

(5)

Ten strips of metal are selected at random.

- (b) Find the probability fewer than 4 of these strips **cannot** be used.

(2)

A second machine cuts strips of metal of length X cm, where X is normally distributed with standard deviation 0.6 cm

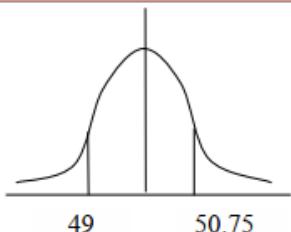

A random sample of 15 strips cut by this second machine was found to have a mean length of 50.4 cm

- (c) Stating your hypotheses clearly and using a 1% level of significance, test whether or not the mean length of all the strips, cut by the second machine, is greater than 50.1 cm

(5)

Q3(a)

$$P(L > 50.98) = 0.025$$

B1cao

$$\therefore \frac{50.98 - \mu}{0.5} = 1.96$$

M1

$$\therefore \mu = 50$$

A1cao

$$P(49 < L < 50.75)$$

M1

$$= 0.9104\ldots \quad \text{awrt } \underline{\underline{0.910}}$$

A1ft

(5)

Question 3 continued

Notes:

(a)

1st M1: for standardizing with μ and 0.5 and setting equal to a z value ($|z| > 1$)

2nd M1: for attempting the correct probability for strips that can be used

2nd Alft: awrt 0.910 (allow ft of their μ)

(b)

M1: for identifying a suitable binomial distribution

A1: awrt 0.991 (from calculator)

(c)

B1: hypotheses stated correctly

M1: for selecting a correct model (stated or implied)

1st Al: for use of the correct model to find $p = \text{awrt } 0.0264$ (allow $z = \text{awrt } 1.94$)

2nd Al: for a correct calculation, comparison and correct statement

3rd Al: for a correct conclusion in context mentioning "mean length" and 50.1

(b)

$$S = \text{number of strips that cannot be used so } S \sim B(10, 0.090)$$

M1

3.3

$$= P(S \leqslant 3) = 0.991166\ldots \quad \text{awrt } 0.991$$

A1

1.1b

(2)

(c)

$$H_0 : \mu = 50.1 \quad H_1 : \mu > 50.1$$

B1

2.5

$$\bar{X} \sim N\left(50.1, \frac{0.6^2}{15}\right) \text{ and } \bar{X} > 50.4$$

M1

3.3

$$P(\bar{X} > 50.4) = 0.0264$$

A1

3.4

$p = 0.0264 > 0.01$ or $z = 1.936\ldots < 2.3263$ and not significant

A1

1.1b

There is insufficient evidence that the mean length of strips is greater than 50.1

A1

2.2b

(5)

(12 marks)

5. A company sells seeds and claims that 55% of its pea seeds germinate.
- (a) Write down a reason why the company should not justify their claim by testing all the pea seeds they produce. (1)

A random selection of the pea seeds is planted in 10 trays with 24 seeds in each tray.

- (b) Assuming that the company's claim is correct, calculate the probability that in at least half of the trays 15 or more of the seeds germinate. (3)

- (c) Write down two conditions under which the normal distribution may be used as an approximation to the binomial distribution. (1)

A random sample of 240 pea seeds was planted and 150 of these seeds germinated.

- (d) Assuming that the company's claim is correct, use a normal approximation to find the probability that at least 150 pea seeds germinate. (3)

- (e) Using your answer to part (d), comment on whether or not the proportion of the company's pea seeds that germinate is different from the company's claim of 55% (1)

5 (a)	The seeds would be destroyed in the process so they would have none to sell	B1	2.4
		(1)	
(b)	$[S = \text{no. of seeds out of 24 that germinate}, S \sim B(24, 0.55)]$		
	$T = \text{no. of trays with at least 15 germinating. } T \sim B(10, p)$	M1	3.3
	$p = P(S \geq 15) = 0.299126\dots$	A1	1.1b
	So $P(T \geq 5) = 0.1487\dots$ awrt 0.149	A1	1.1b
			(3)
(c)	n is large and p close to 0.5	B1	1.2
		(1)	
(d)	$X \sim N(132, 59.4)$	B1	3.4
	$P(X \geq 149.5) = P\left(Z \geq \frac{149.5 - 132}{\sqrt{59.4}}\right)$	M1	1.1b
	$= 0.01158\dots$ awrt 0.0116	A1 cso	1.1b
			(3)
(e)	e.g The probability is very small therefore there is evidence that the company's claim is incorrect.	B1	2.2b

(9 marks)			

1. *Kaff coffee* is sold in packets. A seller measures the masses of the contents of a random sample of 90 packets of *Kaff coffee* from her stock. The results are shown in the table below.

Mass w (g)	Midpoint y (g)	Frequency (f)
$240 \leq w < 245$	242.5	8
$245 \leq w < 248$	246.5	15
$248 \leq w < 252$	250	35
$252 \leq w < 255$	253.5	23
$255 \leq w < 260$	257.5	9

(You may use $\sum f y^2 = 5644171.75$)

A histogram is drawn and the class $245 \leq w < 248$ is represented by a rectangle of width 1.2 cm and height 10 cm.

- (a) Calculate the width and the height of the rectangle representing the class $255 \leq w < 260$ (3)
- (b) Use linear interpolation to estimate the median mass of the contents of a packet of *Kaff coffee* to 1 decimal place. (2)
- (c) Estimate the mean and the standard deviation of the mass of the contents of a packet of *Kaff coffee* to 1 decimal place. (3)

The seller claims that the mean mass of the contents of the packets is more than the stated mass.

Given that the stated mass of the contents of a packet of *Kaff coffee* is 250 g and the actual standard deviation of the contents of a packet of Kaff coffee is 4 g,

- (d) test, using a 5% level of significance, whether or not the seller's claim is justified.
State your hypotheses clearly.

(You may assume that the mass of the contents of a packet is normally distributed.)

(5)

- (e) Using your answers to parts (b) and (c), comment on the assumption that the mass of the contents of a packet is normally distributed.

(e) B1: evaluating the validity of the model used in (d)

5. The lifetime, L hours, of a battery has a normal distribution with mean 18 hours and standard deviation 4 hours.

Alice's calculator requires 4 batteries and will stop working when any one battery reaches the end of its lifetime.

- (a) Find the probability that a randomly selected battery will last for longer than 16 hours. (1)

At the start of her exams Alice put 4 new batteries in her calculator.

She has used her calculator for 16 hours, but has another 4 hours of exams to sit.

- (b) Find the probability that her calculator will not stop working for Alice's remaining exams. (5)

Alice only has 2 new batteries so, after the first 16 hours of her exams, although her calculator is still working, she randomly selects 2 of the batteries from her calculator and replaces these with the 2 new batteries.

- (c) Show that the probability that her calculator will not stop working for the remainder of her exams is 0.199 to 3 significant figures. (3)

After her exams, Alice believed that the lifetime of the batteries was more than 18 hours. She took a random sample of 20 of these batteries and found that their mean lifetime was 19.2 hours.

- (d) Stating your hypotheses clearly and using a 5% level of significance, test Alice's belief. (5)

2.

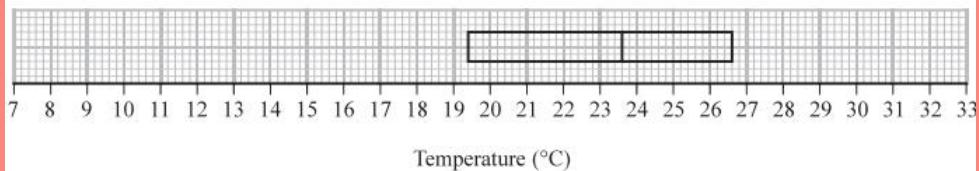

Figure 1

The partially completed box plot in Figure 1 shows the distribution of daily mean air temperatures using the data from the large data set for Beijing in 2015

An outlier is defined as a value

- more than $1.5 \times \text{IQR}$ below Q_1 or
- more than $1.5 \times \text{IQR}$ above Q_3

The three lowest air temperatures in the data set are 7.6°C , 8.1°C and 9.1°C

The highest air temperature in the data set is 32.5°C

(a) Complete the box plot in Figure 1 showing clearly any outliers.

(4)

(b) Using your knowledge of the large data set, suggest from which month the two outliers are likely to have come.

(1)

Using the data from the large data set, Simon produced the following summary statistics for the daily mean air temperature, $x^\circ\text{C}$, for Beijing in 2015

$$n = 184 \quad \sum x = 4153.6 \quad S_{xx} = 4952.906$$

(c) Show that, to 3 significant figures, the standard deviation is 5.19°C

(1)

Simon decides to model the air temperatures with the random variable

$$T \sim N(22.6, 5.19^2)$$

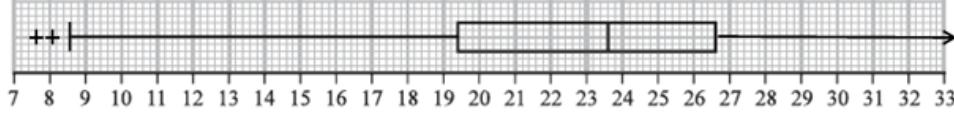

(d) Using Simon's model, calculate the 10th to 90th interpercentile range.

(3)

Simon wants to model another variable from the large data set for Beijing using a normal distribution.

(e) State two variables from the large data set for Beijing that are **not** suitable to be modelled by a normal distribution. Give a reason for each answer.

(2)

(a)	$IQR = 2.6 - 19.4 = 7.2$	B1	This mark is given for finding the interquartile range
	$19.4 - (1.5 \times 7.2) = 8.6$ $19.4 + (1.5 \times 7.2) = 37.4$	M1	This mark is given for a method find the values for the whiskers of the boxplot
 <p>A boxplot on a grid background. The x-axis ranges from 7 to 33. The box starts at 20 and ends at 26. The median is at 23.5. Whiskers extend to 19 and 27. Two outliers are marked with '+' symbols at 7.6 and 8.1.</p>

		A1	This mark is given for plotting the two correct outliers 7.6 °C and 8.1 °C
(b)	October (since it is the month with the coldest temperatures between May and October in Beijing)	B1	This mark is given for a correct suggestion with a supporting reason.
(c)	$\sigma = \sqrt{\frac{S_{xx}}{n}} = \sqrt{\frac{4952.906}{184}} = \sqrt{26.92} = 5.19$	B1	This mark is given for showing the calculation for the standard deviation to three significant figures
(d)	$z = (\pm) 1.2816$	B1	This mark is given for identifying the z-value for the 10th and 90th percentiles (from tables or calculator)
	$2 \times z \times 5.19$	M1	This mark is given for a method to find the interpercentile range between the 10th and 90th value
	$= 13.303$	A1	This mark is given for finding a correct interpercentile range between the 10th and 90th value
(e)	Daily wind speed (Beaufort) since it is qualitative data	B1	This mark is given for stating a correct variable with a supporting reason
	Rainfall (since it is not symmetric)	B1	This mark is given for stating a correct variable with a supporting reason

5. A machine puts liquid into bottles of perfume. The amount of liquid put into each bottle, D ml, follows a normal distribution with mean 25 ml

Given that 15% of bottles contain less than 24.63 ml

- (a) find, to 2 decimal places, the value of k such that $P(24.63 < D < k) = 0.45$

(5)

A random sample of 200 bottles is taken.

- (b) Using a normal approximation, find the probability that fewer than half of these bottles contain between 24.63 ml and k ml

(3)

The machine is adjusted so that the standard deviation of the liquid put in the bottles is now 0.16 ml

Following the adjustments, Hannah believes that the mean amount of liquid put in each bottle is less than 25 ml

She takes a random sample of 20 bottles and finds the mean amount of liquid to be 24.94 ml

- (c) Test Hannah's belief at the 5% level of significance.
You should state your hypotheses clearly.

(5)

Part	Working or answer an examiner might expect to see	Mark	Notes

	$P(\bar{D} < 24.94) = 0.0468$	A1	This mark is given for using the model to find a correct p -value
	$p = 0.0468 < 0.05$, so reject H_0	M1	This mark is given for a correct comparison and non-contextual conclusion
	There is sufficient evidence to support Hannah's belief	A1	This mark is given for a correct conclusion in context stated

5. A health centre claims that the time a doctor spends with a patient can be modelled by a normal distribution with a mean of 10 minutes and a standard deviation of 4 minutes.

- (a) Using this model, find the probability that the time spent with a randomly selected patient is more than 15 minutes.

(1)

Some patients complain that the mean time the doctor spends with a patient is more than 10 minutes.

The receptionist takes a random sample of 20 patients and finds that the mean time the doctor spends with a patient is 11.5 minutes.

- (b) Stating your hypotheses clearly and using a 5% significance level, test whether or not there is evidence to support the patients' complaint.

(4)

The health centre also claims that the time a dentist spends with a patient during a routine appointment, T minutes, can be modelled by the normal distribution where $T \sim N(5, 3.5^2)$

- (c) Using this model,

- (i) find the probability that a routine appointment with the dentist takes less than 2 minutes

(1)

- (ii) find $P(T < 2 \mid T > 0)$

(3)

- (iii) hence explain why this normal distribution may not be a good model for T .

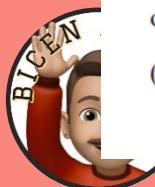

(1)

The dentist believes that she cannot complete a routine appointment in less than 2 minutes.

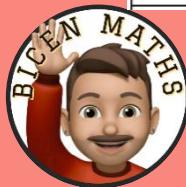

She suggests that the health centre should use a refined model only including values of $T > 2$

- (d) Find the median time for a routine appointment using this new model, giving your answer correct to one decimal place.

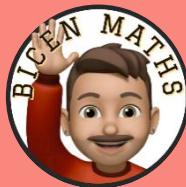

(5)

M1 for selection of a correct model (sight or use of correct normal- may not have label \bar{X}) 1 st A1 for use of this model to get probability allow 0.046~0.047 [Condone awrt 0.953] OR test statistic $z = 1.677\dots$ (awrt 1.68) <u>and</u> cv of 1.64 (or better) or CR $\bar{X} > 11.47\dots$
ALT	2 nd A1 (dep on 1 st A1 or at least $P(\bar{X} > 11.5) < 0.05$ (o.e.)) for a correct conclusion in context -must mention complaint/claim or time/mins is > 10
SC	(M0 for $\bar{X} \sim N(11.5, \dots)$) for correct probability and conclusion (score M0A0A1 on open)
(c)(i)	B1 for awrt 0.196 (from calculator) [Allow 19.6%]
(ii)	M1 for a correct probability ratio expression (may be implied by 1 st A1 scored) 1 st A1 for a correct ratio of probabilities (both correct or truncated to 2 dp) 2 nd A1 for awrt 0.129
(iii)	B1 for a suitable explanation of why model is not suitable based on negative T values Must say that a significant proportion of values < 0 (o.e.) e.g. $P(T > 0)$ should be closer to 1 <u>or</u> Difference between $P(T < 2 T > 0)$ and $P(T < 2)$ is too big (o.e.)
(d)	1 st M1 for a correct conditional probability statement to start the problem <u>or</u> $0.5 \times P(T > 2)$ 2 nd M1 for correct ratio of probability expressions [Must have $P(T > t)$ or $P(2 < T < t)$] 1 st A1ft for a correct equation for $P(T > t)$ (o.e.) ft their answer to part (c)[May be in a diagram] 3 rd M1 for attempt to find t (standardising and sight of 0.2533) or prepare to use calc (ft) Arriving at $P(T < \text{median}) = 1 - 0.5 \times \text{"their 0.8043"}$ will score 1 st 4 marks 2 nd A1 for awrt 5.9 Sight of awrt 5.9 and at least one M mark scores 5/5 [Answer only send to review]

5. The heights of females from a country are normally distributed with

- a mean of 166.5 cm
- a standard deviation of 6.1 cm

Given that 1% of females from this country are shorter than k cm,

(a) find the value of k

(2)

(b) Find the proportion of females from this country with heights between 150 cm and 175 cm

(1)

A female, from this country, is chosen at random from those with heights between 150 cm and 175 cm

(c) Find the probability that her height is more than 160 cm

(4)

The heights of females from a different country are normally distributed with a standard deviation of 7.4 cm

Mia believes that the mean height of females from this country is less than 166.5 cm

Mia takes a random sample of 50 females from this country and finds the mean of her sample is 164.6 cm

(d) Carry out a suitable test to assess Mia's belief.

You should

- state your hypotheses clearly
- use a 5% level of significance

(4)

ALT	Use of z value: Need to see $Z = -1.8(15\dots)$ and cv of ± 1.6449 (allow 1.64 or better) for 1 st A1		
ALT	Use of CR or CV for \bar{X}: Need to see " $\bar{X} < 164.7786\dots$ or $CV = \dots$ (awrt 164.8) for 1 st A1 Condone truncation i.e. 164.7 or better		
	2 nd dA1 (dep on M1A1 only) for a correct inference in context. Must mention <u>Mia's belief</u> or <u>mean height of females/women</u> Do NOT award if contradictory statements about hypotheses made e.g. "not sig"		
SC	M0 for $\bar{X} \sim N(164.6, \dots)$ If they achieve $p = \text{awrt } 0.035$ (o.e. with z -value or CV of 166.3) and a correct conclusion in context is given score M0A0A1 [and SC for awrt 0.97 > 0.95 case]		

1. George throws a ball at a target 15 times.

Each time George throws the ball, the probability of the ball hitting the target is 0.48

The random variable X represents the number of times George hits the target in 15 throws.

(a) Find

(i) $P(X = 3)$

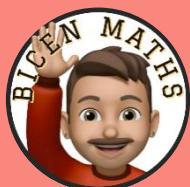

(ii) $P(X \geq 5)$

(3)

George now throws the ball at the target 250 times.

(b) Use a normal approximation to calculate the probability that he will hit the target more than 110 times.

(3)

2. A manufacturer uses a machine to make metal rods.

The length of a metal rod, L cm, is normally distributed with

- a mean of 8 cm
- a standard deviation of x cm

Given that the proportion of metal rods less than 7.902 cm in length is 2.5%

(a) show that $x = 0.05$ to 2 decimal places.

(2)

(b) Calculate the proportion of metal rods that are between 7.94 cm and 8.09 cm in length.

(1)

The **cost** of producing a single metal rod is 20p

A metal rod

- where $L < 7.94$ is **sold** for scrap for 5p
- where $7.94 \leq L \leq 8.09$ is **sold** for 50p
- where $L > 8.09$ is shortened for an extra **cost** of 10p and then **sold** for 50p

(c) Calculate the expected profit per 500 of the metal rods.

Give your answer to the nearest pound.

(5)

The same manufacturer makes metal hinges in large batches.

The hinges each have a probability of 0.015 of having a fault.

A random sample of 200 hinges is taken from each batch and the batch is accepted if fewer than 6 hinges are faulty.

The manufacturer's aim is for 95% of batches to be accepted.

(d) Explain whether the manufacturer is likely to achieve its aim.

(4)
